

Verodus challenge economics

Industry-calibrated Monte Carlo · 20 forex/CFD peers · Blue Guardian Instant · street sales · failure metrics · proposed prices that print · 16 August 2026

This is the single operator book. It replaces the 15 August peer PDFs and the earlier 16 August draft. Instant \$200k is removed. The only Verodus **rule** change versus the live FAQ is Lite funded max drawdown 10% → 8%. Instant stays live: 6% trailing **never locks**, no 2% max-risk, no first-reward % cap. Instant **prices** on \$25k / \$50k / \$100k are raised so every Instant SKU prints (sale margin $\geq$ +20%). Blue Guardian Instant is the closest rule twin and is priced off the live BG25 shop.

Read this as an operator document. Sale is what the shopper pays after the named discount (VERO35, BG25, HELLO, FUNDED40, ALPHA20, MATCH20, HOT20, or a typical ~20% promo). E[X] is expected first-payout dollars. BE is the fee that sets expected profit to zero after refunds. 20% / 40% / 60% are the fees that deliver those contribution margins before affiliate CPA.

1. Industry research (2025–2026)

Retail prop is an estimated **\$850M** fee market in 2026 (Track360), ~2.1M active traders, ~12M challenge purchases at ~\$250 average fee. Five firms — FTMO, FundedNext, The5ers, Apex, Topstep — take ~62% of acquisition. This study is forex/CFD only (Verodus's set). Futures (Topstep, Apex) are a different product and are omitted.

Published funnel (the calibration target)

- **Phase 1:** 25–35% (FTMO/FundedNext community stage tables; traderssecondbrain 2026).
- **Funded (both phases):** 5–14% of purchases. Track360 blended pass across tracked programs: **12.3%**. FTMO historically ~9–12% combined. FPFEX Technology / Finance Magnates, 300k+ accounts, ~10 firms: ~14% reach funded.
- **Ever paid:** ~7% of all buyers (Track360; FPFEX). ~45% of funded accounts receive a first payout in the Track360 summary; FundedNext has disclosed 26–32% of funded reaching payout in earlier windows.
- **Long-term:** 1–3% of buyers become consistently paid.
- **Instant / straight-to-funded sustained:** 4–6% (Track360 Instant / The5ers-class).
- **Failures:** 60–70% of fails are a drawdown breach. Daily DD ~38–42%, max DD ~24–28%, time/abandon ~15–22%, forbidden/news ~6–10%.
- **Topstep 2025 (futures, not in the catalog):** Combine pass 16.8% account-level; 33.3% of funded-level participants paid. Used only as a one-phase sanity check.

This book's FTMO 2-step lands at **P1 22% / funded 13% / P(pay) 13% / year-1 4%** — inside the published band, slightly rich on first-payout versus the 7% ever-paid census (we count first-payout eligibility, not unique humans across retries). Instant P(pay) 22% is first-payout eligibility; Instant year-1 7.2% is the figure that matches 4–6% sustained Instant.

1.1 August 2026 failure-rate literature (operator reading)

Nine trader-facing write-ups were read against this book. They do **not** move the calibration. They confirm the same funnel and they add a firm-side reading of why accounts die. The 99.72% “never earn a split” figure (Power Trading Group / Medium) is treated as an outlier — it is closer to “make a living” than to first-payout eligibility, and it conflicts with Track360 / FPFEX. QuantVPS's “7% of funded get paid” is the same collision: Track360's 7% is of **all buyers**, not of funded. We keep the book.

- **TradersYard:** 90–95% fail first attempt; <7–10% ever funded; 6–7% of funded paid. Trailing DD and tight daily raise failure; static DD and one-step lower it. ~80% of fails blamed on risk; half of fails were in profit at some point.
- **ThePropFirmGuide:** 5–10% pass; most fails in week 1 on daily loss, not a missed target. Daily 45–55% of fails; trailing 20–30%; consistency 10–15%; time 5–10%. 2–4 attempts before first fund. ~60% of 2020–23 firms gone. \$100k is the modal size. Industry fee pool cited \$2–4B (wider than Track360's \$850M forex/CFD slice).
- **JP Trading Capital:** 80% fail in 30 days. Daily 45% / max DD 28% / consistency 17% / overnight 10%. First-attempt pass 18–22% by size (optimistic vs census). 3–5 attempts to first pass. EA users 2.3× pass rate — a filter, not a price input.
- **Pipcy:** 80–95% fail; FPFEX 300k → 7% of passers ever paid; TFT 5% pass; PickMyTrade 94% fail. Funnel: 100 pay → 10–15 funded → 2–4 paid → 1 career. Fails cluster days 1–7 and near the target.
- **Velotrader:** Pass <10%. Revenge trading, misunderstood trail vs static, time pressure, oversize, strategy/rule mismatch. Tick trail harder than EOD trail. Profitable personal-account traders still fail on short-window variance.
- **Power Trading Group (Medium):** 0.28% “earn a profit split”; \$180k fees per paid trader. Use as a marketing-psychology warning, not a pricing input.

- **Axcera (retention):** 94% fail the challenge; 7% ever paid; 98% of funded gone in 6 months (TradingView survey). Typical user spends \$600–800 across retries. Future P&L is retention and LTV, not a cheaper Instant sticker.
- **PropScorer (50k funded accounts):** 41% of funded die in month 1; +28% by month 3; +24% by month 12; **7% of funded survive year 1**. Causes among funded: size creep 31%, strategy drift 24%, revenge 19%, news 12%, no cash buffer 8%, platform 5%. This is why Instant year-1 (7.2% of buyers) is the number that must price Instant, not first-payout 22%.
- **QuantVPS:** 5–10% pass; 7% of funded paid (we reject that as a buyer-level rate). Futures pass rates (Apex 15–20%) are a different product.

2. Calculations and assumptions

2.1 Population (the book)

Five profiles, weights sum to 1. Same mix on every firm and every SKU. That is the point of a peer table: only rules, split, refund, and price differ.

Profile	Weight	Win rate	R:R	Trades/day	Risk / trade	Room awareness	Violation / day
Pro	7%	52%	1.50	2	0.36–0.68%	0.94	0.007%
Semi-skilled	22%	51%	1.38	2	0.44–0.78%	0.86	0.012%
Average	26%	49%	1.22	3	0.52–0.95%	0.72	0.018%
Aggressive	28%	43%	0.96	6	1.50–2.60%	0.18	0.038%
Lottery	17%	40%	0.84	8	2.40–4.20%	0.05	0.065%

2.2 Path engine

- Simulated on a **\$100,000** notional. Dollars scale linearly with account size: $E[X]_{\text{size}} = E[X]_{\$100k} \times (\text{size} / 100,000)$. Rules are percentages of initial, so the scale is exact inside this model.
- **1,000 paths × 5 profiles × 47 products = 235,000** accounts. Seed 42.
- Four market regimes (quiet / normal / volatile / chaotic) with a Markov matrix; session vol multipliers; per-trade friction $3.2 \text{ bp} \times (\text{risk}/1\%) \times \text{regime}$; shock tails; tilt after losses (damped by room awareness).
- Daily DD is dollars of **initial** from start-of-day equity, except Instant-class products that use the day’s equity high.
- Floors: static = $\text{start} \times (1 - \text{dd})$; trailing = $\text{HWM} \times (1 - \text{dd})$; hybrid = $\max(\text{trailing}, \text{start} \times (1 - \text{dd}))$, capped at start.
- Horizon 280 days; 30-day inactivity kills the path. Eval passers take a **12% KYC / never-start** drop before funded. Funded paths start with tilt 0.20 and $1.05 \times$ risk (overconfidence).
- Year-1 survival after first payout: 59% month 1, then 72% to month 3, then 76% to month 12 (independent of firm).
- \$100 minimum reward. Split as published (usually 80%; FTMO 1-Step 90%; The5ers Hyper/Bootcamp 50%; FP Flex 85%).

2.3 Pricing identities (the 20 / 40 / 60 columns)

Let p = P(first payout), X = first-payout dollars (0 if unpaid), F = fee the shopper pays (Sale), k = expected refund as a fraction of the fee.

- **Refund fraction k**
none $\rightarrow k = 0$
first payout (Verodus evals, FTMO 2-Step, most 2-steps) $\rightarrow k = p$
fourth payout (FundingPips Standard / 1-Step, FundedNext 1-Step) $\rightarrow k = p \times 0.35$
 $25\% \times$ first four (Hola) $\rightarrow k = p \times 0.25 \times (1 + 0.55 + 0.35 + 0.22)$
- **$E[\text{cost}] = E[X] + k \times F$** (payouts plus expected refund at the fee actually charged)
- **Break-even fee:** $F = E[X] + k(F) \times F \Rightarrow \text{BE} = E[X] / (1 - k)$ (k capped at 0.95)
For Instant with no refund, $\text{BE} = E[X]$. For a first-payout refund, $\text{BE} = E[X] / (1 - p)$.
- **Fee at margin m :** $F_m = \text{BE} / (1 - m)$. The 20% / 40% / 60% columns are $F_{0.20}, F_{0.40}, F_{0.60}$.
- **Sale margin:** $(F - E[\text{cost}]) / F$. This is contribution before affiliate CPA (~10–15% of fee in this vertical). A 40% sale margin leaves ~25–30% after a 12% CPA.

• **List margin** uses the same $E[X]$ but refunds $k \times \text{list}$ (not used in the grids below).

Worked Verodus Instant \$5k: $E[X]_{\$100k} = \$875.25 \Rightarrow E[X]_{\$5k} = 875.25 \times 0.05 = \text{\$43.76}$. Refund none $\Rightarrow k = 0 \Rightarrow \text{BE} = \43.76 . 20% = $43.76/0.80 = \text{\$55}$. 40% = $43.76/0.60 = \text{\$73}$. 60% = $43.76/0.40 = \text{\$109}$. Sale \$72 $\Rightarrow \text{sale } m = (72 - 43.76)/72 = \text{+39\%}$.

Worked Verodus 1-Step \$5k: $E[X]_{\$5k} = 108.10 \times 0.05 = \text{\$5.41}$. Refund on first payout, $p = 8.808\% \Rightarrow k = 0.08808 \Rightarrow \text{BE} = 5.41 / (1 - 0.08808) = \text{\$5.93}$. $E[\text{cost}]$ at \$36 sale = $5.41 + 0.08808 \times 36 = \text{\$8.58}$. Sale $m = (36 - 8.58)/36 = \text{+76\%}$. 40% fee = $5.93 / 0.60 = \text{\$9.88}$ — the current \$36 sale is far above a 40% target; that is unused pricing power.

2.4 What is not modeled

Affiliate CPA, payment fees, chargebacks, KYC cost, desk/support, broker rebate, scaling after first payout, 90% split add-ons, news-window clawbacks, copy-trade / EA bans as a filter, weekend flatten, striking systems, multi-account correlation, and retry purchase (the 7% ever-paid census is unique-human; our p is per challenge). $E[X]$ is first payout only — a year-1 paid tail exists (1–3% of buyers) and is the main model risk on Instant \$50k+.

3. Recommended Verodus rules (one card per category, every size)

Percentages are of **initial balance**. A \$5k and a \$100k Instant use the same card. Instant \$200k is not offered. The only FAQ edit versus live is Lite funded max DD.

	Instant (live)	1-Step (live)	Lite (CHANGE)	Pro (live)
Phases	0 — funded day 1	1	2	2
Target	None	10%	8% then 5%	10% then 5%
Daily DD	3% from day’s equity high	4% SOD	4% SOD	5% SOD
Max DD	6% trail, never locks	6% hybrid (locks at initial)	8% static eval + funded	10% static
Consistency	20% best day of +days	50% best day on eval	None	None
Min days	5 valid at +0.5% SOD	0 eval / 3 funded	5+5 / 3 funded	5+5 / 3 funded
Fee refund	No	100% on first reward	100% on first reward	100% on first reward
Split	80%	80%	80%	80%
Min reward	\$100	\$100	\$100	\$100
Sizes	\$5k–\$100k (no \$200k)	\$5k–\$200k	\$5k–\$200k	\$5k–\$200k
Change vs live FAQ	None. No trail lock, no 2% risk, no first-reward cap.	None	Funded max DD 10% → 8%	None

Shared: VERO35 on every SKU · 30-day inactivity · unlimited time · daily DD in dollars of initial · one news/EA/weekend/leverage policy for the firm. Do not vary daily, consistency, or payout rules by size.

4. Verodus — list / sale / $E[X]$ / BE / 20 / 40 / 60

Live VERO35 prices. Instant \$200k removed. Lite uses funded 8%. Sale m uses $E[\text{cost}]$ at the current sale (includes expected refund on evals).

Plan	Size	List	Sale	$E[X]$	P(pay)	BE	20%	40%	60%	Sale m
1-Step	\$5,000	\$55	\$36	\$5	8.8%	\$6	\$7	\$10	\$15	+76%

2-Step Pro	\$25,000	\$131	\$85	\$33	12.0%	\$38	\$47	\$63	\$94	+49%
2-Step Pro	\$50,000	\$250	\$163	\$66	12.0%	\$75	\$94	\$126	\$188	+47%
2-Step Pro	\$100,000	\$455	\$296	\$133	12.0%	\$151	\$188	\$251	\$377	+43%
2-Step Pro	\$200,000	\$887	\$577	\$265	12.0%	\$301	\$377	\$502	\$753	+42%
Instant	\$5,000	\$110	\$72	\$44	22.1%	\$44	\$55	\$73	\$109	+39%
Instant	\$10,000	\$184	\$121	\$88	22.1%	\$88	\$109	\$146	\$219	+28%
Instant	\$25,000	\$370	\$242	\$219	22.1%	\$219	\$274	\$365	\$547	+10%
Instant	\$50,000	\$594	\$389	\$438	22.1%	\$438	\$547	\$729	\$1,094	−13%
Instant	\$100,000	\$1,032	\$676	\$875	22.1%	\$875	\$1,094	\$1,459	\$2,188	−29%

Live Instant \$5k sale \$72 sits on the 40% column (\$73). Live Instant \$25k is +10% (below 20%). Live Instant \$50k/\$100k are below break-even. **Proposed Instant** (section 5) lifts \$25k / \$50k / \$100k to the 20% column so every Instant SKU prints without adding trail-lock, 2% risk, or a first-reward cap. 1-Step \$5k 40% is \$10 — you could charge \$49 and still print. Lite \$100k 40% is \$254 versus sale \$241 (just under). Pro \$100k 40% is \$251 versus sale \$296 (clears 40%).

5. Proposed Verodus prices — Instant in the positive

Rules stay the live FAQ (Instant never locks). Only the **sticker** moves. Instant proposed sale = max(live VERO35, 20% column). That is the lowest fee at which every Instant size has a positive contribution after E[X]. \$5k and \$10k already clear 20% and are left alone. \$25k / \$50k / \$100k rise. Evals keep the earlier raise toward Hola / FTMO / FP Standard — they already print; the raise is unused pricing power, not a rescue. List stays VERO35 (sale ÷ 0.65, rounded).

Plan	Size	Live list	Live sale	Live m	E[X]	BE	20%	Proposed sale	Proposed list	Proposed m	Action
1-Step	\$5,000	\$55	\$36	+76%	\$5	\$6	\$7	\$49	\$75	+80%	Raise

2-Step Pro	\$200,000	\$887	\$577	+42%	\$265	\$301	\$377	\$799	\$1,229	+55%	Raise
Instant	\$5,000	\$110	\$72	+39%	\$44	\$44	\$55	\$72	\$111	+39%	Keep
Instant	\$10,000	\$184	\$121	+28%	\$88	\$88	\$109	\$121	\$186	+28%	Keep
Instant	\$25,000	\$370	\$242	+10%	\$219	\$219	\$274	\$274	\$422	+20%	Raise
Instant	\$50,000	\$594	\$389	−13%	\$438	\$438	\$547	\$547	\$842	+20%	Raise
Instant	\$100,000	\$1,032	\$676	−29%	\$875	\$875	\$1,094	\$1,094	\$1,683	+20%	Raise

Instant \$100k proposed \$1,094 is 1.62× the live \$676 and 2.34× Blue Guardian’s live \$467. That is the point. BG Instant, FP Zero, and Alpha Instant are selling \$100k below their own E[X]. Matching them is how Instant becomes a hole. \$5k Instant stays \$72 — already the 40% column, already next to (not under) BG’s \$54.

6. Relative price analysis — live Verodus vs the 20-firm set

For each family and size, Verodus sale versus the peer distribution (same family, same size, Verodus excluded). Rank 1 = cheapest. “vs med” is Verodus sale / peer median. A cheap rank with a high sale margin is unused pricing power. A cheap rank with a negative margin is a hole.

Family	Size	Vero sale	Vero m	Peers n	Peer min	Peer median	Peer max	vs med	Rank cheap	Peer 40% med	Vero vs 40% med
instant	\$5,000	\$72	+39%	9	\$39	\$63	\$99	1.14×	6 / 10	\$70	1.03×

How to read the ranks

- **Instant \$5k** is mid-pack (above Alpha \$40 / FP \$48 / live BG \$54, next to Hola \$79). Margin +39% — you are not the cheap Instant, and you should not become it. BG Instant \$5k is now \$54 with BG25 and still only +16%; their \$10k+ is red.
- **Live Instant \$50k/\$100k** are cheaper than a 40% peer fee and below your own BE. Relative “value” here is a hole. Proposed \$547 / \$1,094 fixes it without touching rules.
- **1-Step** is at or under the peer floor at every size (0.6–0.8× median) with +58–76% margins. That is unused pricing power, not a competitive need.
- **Lite** is the cheapest or second-cheapest 2-step (tied with Maven \$18 at \$5k). \$100k \$241 is ~0.6× peer median (~\$400–550). Margin +33% is the thinnest 2-step in the set.
- **Pro** is FTMO’s rulebook at ~0.5× FTMO’s \$100k fee (\$296 vs \$626) and ~0.7× peer median. Room to raise toward \$449 and still undercut FTMO.

7. All 20 firms — price vs break-even / 20 / 40 / 60

Same columns as the 15 August FundingPips / FTMO / Alpha / Hola PDFs. Values are this book, not the 15 August 84/13.5/2.5 book. Verodus rows are highlighted. Negative sale margins in red.

7.1 Instant / straight-to-funded

8. Peer read vs the 15 August PDFs

Those PDFs used a harsher book (3.5% pro / 14.5% average / 60% aggressive / 22% scalper). P(pay) was 1–4%. This book is calibrated to the industry funnel, so E[X] and BE are higher and sale margins are lower. Direction is the same: Instant \$5k prints, Instant \$50k+ does not; cheap 2-steps with 10% funded DD are the thin SKUs; tight 1-steps and 6/6 Pros print.

FundingPips

Zero (their Instant) still prints at \$5k (+14%) and is a hole from \$10k (–18% to –87%). HELLO 20% except \$100k. 1-Step Flex remains their best unit (+69–81%) — 12% target, 3/12, refund on 4th. 2-Step Standard is no longer the –EV Lite-class hole of the 15 August book; under this funnel it prints (+71% at \$5k, +71% at \$100k) because they charge \$27–\$544 versus Verodus Lite \$18–\$241. 2-Step Pro (6/6, 3% daily, no refund) still prints (+75–77%). **Steal the Pro tightness, not the Standard sticker.** Do not copy Zero’s \$48 \$5k.

FTMO

No sitewide sale (EUR×1.16). 1-Step: 10% target, 3% daily, 10% trail, 50% best-day, 90% split, no refund. Sale \$92–\$1,159, margins +54–71%. 2-Step: 10/5, 5/10 static, refund, \$103–\$1,253, +73–79%. Verodus 1-Step is cheaper and tighter (6% hybrid vs 10% trail) — keep the hybrid, raise toward \$49/\$79/\$449. Verodus Pro is the same 10/5 · 5/10 at one-third the \$100k fee. Raise Pro; do not tighten it to look like FP Pro.

Alpha Capital

FUNDED40 Instant / ALPHA20 evals. Instant \$40 \$5k is +14% and \$100k \$274 is –152% — the poster child for cheap Instant. One 10% (6% trail, 40% cons, no refund) prints +61–81%. Pro 6% is the FP-Pro twin and prints. Pro 10% is Lite-class room at a higher sticker than Verodus Lite, so it still prints. Do not match Instant \$40.

Hola Prime

MATCH20. Direct Instant has 2% funded risk and a 25%×4 refund; \$5k +29%, \$100k −22%. 1-Step Prime 10/3/6 + 2% funded risk, \$47–\$839, +58–77%. 2-Step Prime 8/5 5/10 + 2% funded risk, \$38–\$751, +57–75%. Closest rule-for-rule peer. Beat them on 1-Step with refund + 4% daily (they have 3%) at a \$49 \$5k, not \$36.

The rest of the twenty

FundedNext Stellar Instant and FXIFY Instant Standard show P(payment) ~53% because they have **no daily** — only works if you also cap size (FN Instant max \$20k) or charge more. Do not copy. Maven \$18 2-step is the race Verodus Lite is in; Maven \$100k +38% versus Lite +33%. The5ers Bootcamp / Maven 3-step print on ~5% P(payment) and a \$14–\$22 fee — skip the 3-step. E8 One / Signature are tight 1-steps (6% or 4% trail + 35–40% best-day) and print at FTMO-like stickers. BrightFunded’s \$200k \$238 is a listed anomaly and goes red (−32%) — ignore as a price signal.

9. Blue Guardian Instant — the closest twin

Blue Guardian Instant is the product shoppers will put next to Verodus Instant. Both are 0-step, 3% daily, 6% trailing, 20% consistency, 80% split, \$5k–\$100k, no time limit. The differences that move money are small on the FAQ and large on the P&L.

Rule	Verodus Instant (live FAQ)	Blue Guardian Instant (help + shop 16 Aug 2026)
Daily DD	3% of initial from the day’s equity high (tightens on a winning day)	3% of initial from the day’s starting balance (SOD; does not tighten intraday)
Max DD	6% trailing HWM, never locks	6% trailing HWM, locks at initial once +6% , then a 1% withdrawal buffer
Valid days	5 days with closed day ≥ 0.5% of SOD	5 days; any traded day counts
Consistency	20% best day of positive days (blocks payout, does not breach)	Same 20% payout gate
Refund / split	No refund · 80% (90% add-on)	No refund · 80% (90% add-on)
Street sale	VERO35: \$72 / \$121 / \$242 / \$389 / \$676	BG25 25% off: \$54 / \$75 / \$156 / \$243 / \$467
This book P(payment) / E[X] \$100k / year-1	22.1% · \$875 · 7.2%	22.1% · \$911 · 7.1% (lock + SOD daily raise extractable profit)

The lock is the one rule Verodus was told not to copy. It is also why BG Instant costs **more** to operate (\$911 vs \$875 at \$100k) while they charge **less** (\$467 vs live \$676, vs proposed \$1,094). Once the trail locks at start, a winner can withdraw down to the 1% buffer. Verodus’s never-lock floor keeps rising with HWM, so the same winner leaves more on the table — and still we must not match their \$467. BG Instant \$5k at \$54 still prints (+16%). From \$10k they are already red (−22% / −46% / −88% / −95%). Their Instant is a customer-acquisition SKU, not a unit-economic SKU. Do not follow them down.

Size	Vero live	Vero live m	Vero proposed	Vero prop. m	BG sale BG25	BG m	BG 20%	Vero prop. vs BG
\$5,000	\$72	+39%	\$72	+39%	\$54	+16%	\$57	1.33×
\$10,000	\$121	+28%	\$121	+28%	\$75	−22%	\$114	1.61×
\$25,000	\$242	+10%	\$274	+20%	\$156	−46%	\$285	1.76×
\$50,000	\$389	−13%	\$547	+20%	\$243	−88%	\$570	2.25×
\$100,000	\$676	−29%	\$1,094	+20%	\$467	−95%	\$1,139	2.34×

Read the last column as “how much more we must charge than BG to stay solvent,” not as a conversion problem. At \$100k the solvent Instant is 2.3× BG’s sale because BG is 0.41× their own 20% fee (\$1,139). Copying BG Instant’s **rules** (lock, SOD daily, drop the 0.5% valid-day) would raise our E[X] toward \$911 and force an even higher sticker. Keep the harder Instant card and price it.

10. Street sales — Prop Firm Match and the August 2026 promo book

The live Prop Firm Match FX+crypto challenge table (propfirmmatch.com/prop-firm-challenges, assets = fx + crypto) is Cloudflare-gated from this environment. The **offers** index and the firm shops were used instead, cross-checked on 16 August 2026 against Opinatron’s August promo list, PropFirmMap’s discount-war note, PropFirmDiscountFinder, and each peer’s checkout banner. Sale prices already in section 7 are these street prices, not list. Blue Guardian Instant was refreshed to the live BG25 ladder in this revision.

Firm	Live code	Off	What the shopper actually pays
Verodus	VERO35	35%	Sitewide on every SKU
Blue Guardian	BG25	25%	Live 16 Aug 2026 — all CFD & futures. Instant \$5k \$54 / \$100k \$467
FundingPips	HELLO	20%	First challenge; excludes \$100k. Affiliate FP/2C14A034 also 20–25%
FTMO	none / €101 off \$10k	0–42%	No sitewide sale. Occasional \$10k-only cut if no active 10k
FundedNext	HOLY15 / 5BESTOFF / FNF30	5–30%	Rotating; 30% is first-challenge seasonal
Alpha Capital	FUNDED40 / ALPHA20–30	20–40%	Instant 40%; evals 20–30%
Hola Prime	MATCH20	20%	Prop Firm Match affiliate code, still live
FXIFY	HOT20 / NEW30	20–30%	HOT20 summer to 1 Sep 2026 excl. Instant Lite; NEW30 2-phase Pro
The5ers	PROPFXD	25%	Aggregator listing Aug 2026
Goat Funded	promo 20–40%	20–40%	Stacking promos; do not treat 40% as list
Maven	INVEST	15–20%	Street is still the \$18 \$5k 2-step
E8 Markets	SAVE2TRADE / ELLIOTE8	5–10%	Rarely deep-discounts; stickers already high
Instant Funding	~20% typical	20%	Same band as FXIFY Instant
Fintokei	20% listed	20%	On-site 20% off
The Funded Trader	~20% typical	20%	Standard mid-tier
City Traders Imperium	APR30-class	20–30%	Seasonal 30% still cycles
Funding Traders	~20% typical	20%	Mid-tier 2-step
For Traders	~20% typical	20%	Mid-tier 2-step
BrightFunded	~20% typical	20%	\$200k list is an anomaly — ignore
Ment Funding	~20% typical	20%	Seacrest-class mid-tier

Industry pattern: 20% is the default first-order cut (HELLO, MATCH20, HOT20, typical mid-tier). 25–35% is the aggressive band (BG25, VERO35, The5ers 25%, Goat 40% stacks). FTMO and E8 barely discount. Instant is where the deep cuts destroy unit economics — FUNDED40, BG25, HELLO on Zero. VERO35 is already in the aggressive band; the answer is a higher **list** on Instant \$25k+, not a deeper code. Do not add a second Instant-only discount.

11. Failure metrics — for the prop firm, not the trader

Trader blogs count “how do I pass.” This section counts “what dies on our book, and what that does to contribution.” Same 235k-path library. Weights are the industry mix. Instant failures are labelled p1_* in the engine because Instant is modelled as a single funded-from-purchase phase.

Book (share of ending reasons)	Daily DD	Max DD	Time / abandon	Rule / news	KYC	Post-payout
Whole 20-firm book	37.3%	40.9%	8.3%	1.6%	1.5%	10.3%
Verodus Instant	46.4%	30.2%	6.9%	0.5%	0.0%	16.1%
Blue Guardian Instant	34.0%	42.9%	6.6%	0.4%	0.0%	16.1%
Verodus 1-Step	19.6%	61.1%	10.8%	0.6%	1.9%	6.1%
Verodus Lite	40.3%	40.5%	9.5%	0.6%	1.6%	7.5%
Verodus Pro	44.2%	36.4%	8.7%	0.8%	1.8%	8.1%
FTMO 2-Step (calibration)	44.4%	35.7%	8.1%	0.9%	2.0%	8.9%

Literature vs this book. Published fail mix (PropFirmGuide / JPTC / Pipcy): daily 45–55%, max DD 20–30%, consistency/time 10–20%, rules 6–10%. Our Instant mix is **daily-heavy** because 45% of the population is Aggressive + Lottery and Instant’s 3% daily is the first wall they hit — that is the product working. Eval mixes shift toward max DD (the 6–10% floor) and time/abandon. Post-payout attrition is the PropScorer month-1/3/12 curve (41% / 28% / 24% of **funded**), applied after first payout; it is not a challenge fail.

11.1 One hundred accounts — operator P&L

For each Verodus plan at \$5k and \$100k: 100 independent purchases, live sale vs proposed sale. Contribution = 100 × sale – 100 × E[*cost*]. Instant has no refund, so E[*cost*] = E[*X*]. This is the number that must stay positive.

Plan	Size	P(<i>pay</i>)	Year-1	Fail before <i>pay</i>	Live sale ×100	Live payouts	Live contrib.	Prop. sale ×100	Prop. contrib.
Instant	\$5,000	22.1%	7.2%	77.9%	\$7,200	\$4,376	\$2,824	\$7,200	\$2,824
Instant	\$100,000	22.1%	7.2%	77.9%	\$67,600	\$87,525	\$-19,925	\$109,400	\$21,875
1-Step	\$5,000	8.8%	2.9%	91.2%	\$3,600	\$858	\$2,742	\$4,900	\$3,928
1-Step	\$100,000	8.8%	2.9%	91.2%	\$33,500	\$13,761	\$19,739	\$44,900	\$30,135
2-Step Lite	\$5,000	10.6%	3.4%	89.4%	\$1,800	\$871	\$929	\$2,700	\$1,733
2-Step Lite	\$100,000	10.6%	3.4%	89.4%	\$24,100	\$16,159	\$7,941	\$34,900	\$17,594
2-Step Pro	\$5,000	12.0%	4.2%	88.0%	\$2,000	\$903	\$1,097	\$3,600	\$2,505
2-Step Pro	\$100,000	12.0%	4.2%	88.0%	\$29,600	\$16,806	\$12,794	\$44,900	\$26,259

Instant \$100k live: 100 × \$676 = \$67,600 in, \$87,525 out, **–\$19,925**. Proposed: 100 × \$1,094 = \$109,400 in, \$87,525 out, **+\$21,875** (~20%). That is the whole Instant decision. Evals already contribute at live prices; the proposed raise is extra, not a rescue. Year-1 Instant ~7 of 100 buyers matches PropScorer’s 7% funded-year-1 and Track360’s 4–6% sustained Instant. Axcera’s LTV point stands: the second and third Instant purchases from the same human are extra fee with a similar E[*X*] — do not spend that option by underpricing the first.

Retries (industry 2–4 attempts, ThePropFirmGuide / JPTC) raise fee LTV and raise payout LTV only for the subset who eventually pass. We price the single challenge. A 12% CPA on the proposed Instant \$100k is ~\$131 — still inside the 20% if affiliates are held to that. A 25% CPA on Instant \$100k eats the whole margin; cap Instant affiliate at 10–12%.

12. Proposed Verodus vs each competitor (difficulty + unique rules)

Proposed Verodus sale against the peer’s street sale at the same size. **Difficulty** is this book: higher P(*pay*) or higher E[*X*] = easier / more expensive to operate. A peer who is easier and cheaper is a hole we do not match. A peer who is harder and dearer is unused room. Instant rows use proposed Verodus prices (all positive). Eval rows use the proposed raise.

12.1 Instant \$5k and \$100k

Firm / plan	Unique rules	Diff.	Size	Peer sale	Peer m	Vero proposed	Vero m	Vero / peer

Two-step proposed column is **Pro** (\$36 / \$449). Lite proposed is \$27 / \$349 — still the cheap 2-step, still above Maven \$18 / \$279, still under FP Standard \$27 / \$544. Do not put Lite on the Pro sticker.

12.4 Lite vs the cheap 2-step street (\$5k / \$100k)

How to use section 12. If Vero/peer > 1.3×

 and the peer is red, we are priced to live and they are not — keep the gap. If Vero/peer < 0.7× and we still print 40%+ (1-Step, Pro), raise. If a peer is easier (no daily, trail lock, 10% funded DD) their cheap sticker is not a comparable. Blue Guardian Instant is the only Instant that is **similar** on difficulty and still cheaper — and they are red from \$10k. That is the proof that “similar Instant, cheaper price” is not a strategy.

13. What to do

Plan	Rules	Live \$5k / \$100k	Do this	Proposed \$5k / \$100k
Instant	Keep live FAQ. No \$200k. No trail lock.	\$72 +39% / \$676 −29%	Keep \$5k/\$10k. Raise \$25k to \$274. Raise \$50k to \$547 and \$100k to \$1,094 so Instant prints. Do not match BG25 \$54/\$467.	\$72 +39% / \$1,094 +20%
1-Step	Keep 6% hybrid + 50% best-day + refund.	\$36 +76% / \$335 +59%	Raise toward Hola, still under FTMO. Unused pricing power.	\$49 / \$449
Lite	Funded DD 10% → 8%. Rest live.	\$18 +52% / \$241 +33%	Ship the 8% floor. Raise off Maven \$18 toward FP Standard \$27.	\$27 / \$349
Pro	Keep 10/5 · 5/10.	\$20 +55% / \$296 +43%	Keep FTMO room. Price as the grown-up 2-step.	\$36 / \$449

Do not launch a 3-step. Do not default 90% split (offer as a paid add-on). Do not add an Instant fee refund. Do not vary rules by account size. Do not match Alpha Instant \$40 or Maven 2-step \$18. VERO35 stays — it is the shopper language; raise list if you need a higher sale.
