

Break-even by account and recommended sale

Every Verodus size has a stated BE. Instant uses year-1 cost. 1-Step / Lite / Pro use first-payout + fee refund. Recommended sale is multi-factor — not the family median. 16 August 2026.

Instant BE = $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}}) = \$875.25 \times (7.161\% / 22.07\%) = \text{\$284 at \$100k}$, then $\times \text{size}/100\text{k}$. No refund. **Eval BE** = $E[X] / (1 - P(\text{pay}))$: 1-Step $\$108.10 / 0.91192 = \text{\$119}$; Lite $\$136.01 / 0.89384 = \text{\$152}$; Pro $\$132.54 / 0.88002 = \text{\$151}$ at \$100k, then $\times \text{size}/100\text{k}$. $F_m = \text{BE} / (1 - m)$. List = sale $\div 0.65$. Instant \$200k pulled. Lite funded max DD is **8%** (was 10% on the 13 Aug catalog).

Rec factors: (1) payout BE, then **10% assumption error**, then **\$1 + wage share**, then $\div 0.80$ for 20% marketing; (2) Instant stays under BG / Goat; (3) do not match a peer low that fails that floor (Alpha Instant, Maven \$5k–\$25k, BrightFunded \$200k); (4) 1-Step live already covers — keep it; (5) Lite / small Pro lift to the floor so they are the cheapest solvent 2-step, not the cheapest hole. Instant \$100k \$439 is under FP \$444 and $0.94 \times$ BG \$467.

1. Recommended Verodus sale (VERO35)

1b. Break-even fee (\$)

Same sizes as the rec card. Instant = year-1, no refund. Evals = first-payout + fee refund.

Plan	\$5k	\$10k	\$25k	\$50k	\$100k	\$200k	Basis
Instant	\$14	\$28	\$71	\$142	\$284	—	year-1
1-Step	\$6	\$12	\$30	\$59	\$119	\$237	first + refund
2-Step Lite	\$8	\$15	\$38	\$76	\$152	\$304	first + refund
2-Step Pro	\$8	\$15	\$38	\$75	\$151	\$301	first + refund

Instant \$100k BE is **\$284**. 1-Step \$119 · Lite \$152 · Pro \$151. Then × size/100k.

1c. Plan / Size / List / Sale / E[X] / P(pay) / BE / 20% / 40% / 60% / Sale m

Use **20 / 40 / 60 as the reference columns** — that is the industry layout. Instant **target is 30%** (greater margin that still sells). 40% Instant \$100k is \$473 (Blue Guardian \$467). 60% is \$710 (above Goat \$559 / Instant Funding \$639). Do not aim Instant at 40 or 60. Sale is the recommended VERO35 fee. List = sale ÷ 0.65. Instant E[X] and BE are year-1; P(pay) is first-payout eligibility (22.1%). Eval E[X] / P(pay) / BE are first-payout + refund. Sale m = (sale – E[cost]) / sale.

Plan	Size	List	Sale	E[X]	P(pay)	BE	20%	40%	60%	Sale m

Green = Instant (year-1). Blue = evals (first-payout). Sale is the opex-checked fee. Instant \$25k/\$50k sit on the fully loaded floor. Lite is no longer the industry low on \$5k–\$25k — those lows do not cover wages.

1d. Wage mix — CAD 10,000 / month across 310 accounts

CAD 10,000 × 0.72 = **USD 7,200 / month**. Spread across a 310-account early book (Instant 98 · 1-Step 67 · Lite 82 · Pro 63). Weight = plan factor × (0.65 + 0.35 × size/100k). Instant 0.85 (no phases), 1-Step 1.00, Lite 1.15, Pro 1.10. Flat average is \$23 / account; Instant \$5k gets \$16, Pro \$200k gets \$43. At 150 accounts/month the wage line roughly doubles; at 600 it halves.

Plan	Size	N / mo	Weight	Wage \$	Share of wages

1e. Opex stack — error first, then \$1 + wage, then marketing 20%

Build the fee in order. (1) **Payout BE** (year-1 Instant; first-payout + refund on evals). (2) **Assumption error = 10% of BE**, taken first. (3) **\$1 per account + wage share**. (4) **Marketing 20% of sale** ⇒ $S_{\text{opex}} = (\text{BE} \times 1.10 + \$1 + \text{wage}) / 0.80$. Peer low is the cheapest same-family street fee. **Low OK** means that low already covers S_{opex} . If it does not, **First OK** is the cheapest peer that does. Do not match a low that fails the stack.

Plan	Size	N	Opex \$	Peer low	Low OK?	First OK \$	Rec	After	Mo. left

Book	—	310	—	—	—	—	\$48,809	13.5%	\$6,578

Instant \$100k: S_{opex} \$422. Alpha \$274 is a hole. FXIFY Lite \$399 is still short. Rec \$439 sits under FP \$444 and BG \$467. Instant \$10k \$69 under FP \$70; \$25k/\$50k \$139 / \$239 under FXIFY / BG. 1-Step lows all cover — keep live (cheapest). Lite sits on/under the first solvent peer. Pro stays a step above Lite and just over Maven from \$50k. Mo. left is leftover × N at the 310-account mix. Book row is the monthly total.

1f. Opex arithmetic — BE → +10% → +\$1 → +wage → ÷ 0.80 → rec / list

Loaded = BE + (BE × 0.10) + \$1 + wage share. $S_{\text{opex}} = \text{Loaded} / 0.80$. Rec is the shop-round at or above that floor that still sits under the first solvent peer. List = $\text{rec} \div 0.65$. After = $\text{rec} \times 0.80 - \text{Loaded}$ (cash left after marketing + the stack).

2-Step Pro	\$200,000	\$301	\$30	\$1	\$43	\$375	\$469	\$577	\$888	\$87
Book	310 accts	—	—	—	\$7,200	—	—	\$48,809	—	\$6,578

Instant \$100k: BE \$284 + \$28 error + \$1 + \$24 wage = \$338 loaded → $S_{\text{opex}} \$422 \rightarrow \text{rec } \439 (list \$675) → leftover ~\$13. Book leftover at 310 accounts is +\$6,578 / month (13.5% of rec revenue).

1g. Checkout add-ons — do they change rec?

Live checkout already uses this list card. Add-on sticker = **round(list × %)** (Pro \$100k news = round(\$445 × 15%) = **\$67**). VERO35 takes 35% off challenge + add-ons, so the shopper pays 65% of the sticker. Challenge rec does **not** move — shoppers compare the naked fee to FP / BG / Maven. Add-on cash is extra AOV. Do not cut rec because some buyers add news.

People do buy them. Early-book attach (not a CRM forecast): Instant news 32% / weekend 10% / weekly 8% / on-demand 18% (~54% take at least one). Lite is cheaper-sensitive (~37%). Pro is the popular tab (~57%). Weekly 70% is a worse split than the default 80% biweekly — some buyers will not notice; that is fine. Checkout currently lets weekly and on-demand stack — make those two exclusive.

Add-on	% of list	Instant \$100k	1-Step \$100k	Lite \$100k	Pro \$100k	Shopper pays
News trading	15%	\$101	\$77	\$62	\$67	65% of sticker (VERO35)
Weekend holding	18%	\$122	\$93	\$75	\$80	65% of sticker (VERO35)
Weekly 70% split	6%	\$40	\$31	\$25	\$27	65% of sticker (VERO35)
On-demand 90% split	20%	\$135	\$103	\$83	\$89	65% of sticker (VERO35)

Sticker is pre-coupon. Shopper net = 65% of sticker. News / weekend / weekly are insurance the firm should sell. On-demand 90% is the expensive one.

1h. \$100k add-on leftover per buyer (live %)

Net \$ = sticker × 0.65. Extra E[X] is the add-on payout cost versus default 80% biweekly (Instant = year-1; evals = first-payout). After ads = Net × 0.80 – extra E[X]. On-demand Instant: 90% split × anytime withdrawal ≈ +41% year-1 E[X] (\$116 on \$284). Net fee \$88 does not cover it. Evals stay fine at 20% (first-payout only scales 80% → 90%). Weekend gap tail is not in Extra E[X] — keep that %.

Plan	Add-on	Attach	Sticker	Net \$	Extra E[X]	After ads	OK?

1i. Blended leftover if the early book actually buys add-ons

E[addon \$] is attach × shopper net, per account. E[addon after] is that cash minus extra E[X] and 20% ads on the addon. Blended after = challenge leftover + E[addon after]. Challenge rec stays. This is upside, except Instant on-demand at 20%.

Plan	Size	N	Challenge after	E[addon \$]	E[addon after]	Blended after	Mo. blended
Instant	\$5,000	15	\$6	\$5	\$3	\$9	\$134

2-Step Pro	\$100,000	10	\$33	\$34	\$22	\$55	\$548
2-Step Pro	\$200,000	5	\$87	\$68	\$44	\$130	\$651
Book	—	310	\$6,578	—	\$2,462	\$9,040	\$9,040

Challenge-only book leftover **\$6,578** / month. Add-ons at live % add **\$2,462** (blended **\$9,040**). After raising Instant on-demand to 32%: **\$9,313**. Rec challenge fees unchanged.

1j. Suggested add-on % (not the challenge fee)

Keep news 15%, weekend 18%, weekly 6% (Instant weekly is about flat — leave it cheap so people pick 70% over 90%). Raise Instant on-demand from 20% → **32% of list** (\$135 → \$216 sticker, \$88 → \$140 shopper) so year-1 90% + anytime clears. Evals keep 20%. Better product split: Instant on-demand stays 80% (speed only, ~12% of list) and 90% is eval-only. Do not refund add-ons on first payout — refund the challenge fee only.

Add-on	Live %	Rec % Instant	Rec % evals	Instant \$100k live	Instant \$100k rec	Why
News trading	15%	15%	15%	\$101	\$101	Keep. High attach, low extra E[X]. Eval already allows news.
Weekend holding	18%	18%	18%	\$122	\$122	Keep. Gap tail is the risk — do not cheapen.
Weekly 70% split	6%	6%	6%	\$40	\$40	Keep cheap. Instant is about flat; 70% split is a decoy vs 90%.
On-demand 90% split	20%	32%	20%	\$135	\$216	Raise Instant to 32%. 90% + anytime is underwater at 20%.

2. Break-even for every Verodus account

This is the number the rest of the card is built on. Instant also shows first-payout E[X] so the old \$875 / \$1,094 path is visible and not used.

Plan	Size	Basis	E[X] used	P(pay)	Year-1	BE \$	20%	40%	60%	13 Aug	Rec

2-Step Pro	\$200,000	first	\$265	12.0%	4.2%	\$301	\$377	\$502	\$753	\$577	\$577

Green = Instant (year-1 BE). Blue = evals (first-payout BE). 1-Step \$5k BE is \$6; sale \$36 is leftover live, not a 60% target. Instant \$100k BE is \$284, not \$875. Columns are 20 / 40 / 60. Instant rec is the 30% print.

3. Why Instant first-payout margins were wrong

Same-difficulty Instant (D 84–94): Blue Guardian, Instant Funding, Goat, Hola, FP Zero, FXIFY Lite, Alpha. They charge **\$274–\$839** at \$100k. Our first-payout book put Verodus Instant E[X] at **\$875** and the 20% fee at **\$1,094** — above every peer — and painted those peers at –30% to –95%. A market that keeps selling Instant at Goat / BG / IF prices is not all insolvent. The industry report already said **year-1 (7.2% of buyers) prices Instant**, not first-payout eligibility (22%). First-payout 22% is “hit 5 valid days”; most of those accounts die in month 1 (PropScorer 41% of funded). Sustained Instant is 4–6% (Track360) — this book’s year-1 is 7.2%. **Instant E[cost] = E[X]_{first} × (P_{yr1} / P_{pay})**. Evals stay on first-payout + refund (those margins already matched the shelf).

Firm	Plan	D	Sale	P(pay)	Year-1	E[X] first	m first	E[X] yr1	m yr1
Alpha Capital	Instant	94.2	\$274	13.0%	4.2%	\$690	-152%	\$223	+19%
FXIFY	Instant Lite	92.9	\$399	15.7%	5.1%	\$680	-70%	\$218	+45%
FundingPips	Zero	92.7	\$444	15.3%	5.0%	\$829	-87%	\$271	+39%
Blue Guardian	Instant	84.2	\$467	22.1%	7.1%	\$911	-95%	\$292	+38%
Goat Funded	Instant GOAT	92.5	\$559	16.6%	4.9%	\$846	-51%	\$250	+55%
Instant Funding	Instant	88.0	\$639	21.4%	6.9%	\$841	-32%	\$272	+57%
FXIFY	Instant Standard	39.3	\$639	54.2%	17.9%	\$716	-12%	\$237	+63%
Verodus	Instant	89.2	\$676	22.1%	7.2%	\$875	-29%	\$284	+58%
Hola Prime	Direct	89.3	\$839	23.8%	8.7%	\$920	-10%	\$338	+60%
Verodus rec	Instant	89.2	\$439	22.1%	7.2%	\$875	-99%	\$284	+35%

Blue = live Verodus. Green = rec. On year-1, BG \$467 is +38%, Goat \$559 is +55%, IF \$639 is +57%, Hola \$839 is +60%, rec \$439 is +35%. First-payout column is the old (wrong) Instant basis. 40–60% year-1 takes are what Goat / IF / Hola already charge — too high for a new name.

4. Rec vs BE / 20% / 40% / 60% (Instant = year-1)

Instant: **BE = E[X]_{first} × (P_{yr1} / P_{pay})**, no refund. Evals: first-payout E[X] and refund ⇒ **BE = E[X] / (1 – P(pay))**. F_m = BE / (1 – m). Rec is the shopper price.

Plan	Size	Rec	Rec m	E[X]	BE \$	20%	40%	60%	13 Aug	Median

Green = rec is below BE (a hole). Blue = rec equals the 13 Aug live fee and is above BE. Instant rec sits above the opex floor at \$10k+ (\$5k is the shop floor). 1-Step stays on live VERO35. Lite / Pro are the opex-checked rec, not the 13 Aug \$18–\$241 / \$20–\$296 card. Rec m here is leftover after payout cost, not after the opex stack.

5. Instant — every instant street fee

Stack: year-1 BE, +10% error, +\$1, +wage share, then ÷ 0.80 for marketing. Instant \$100k opex floor is \$422; Alpha \$274 fails it. FXIFY Lite \$399 is close but short. Rec \$439 sits under FP \$444 and BG \$467. \$10k \$69 under FP \$70; \$25k/\$50k \$139 / \$239 under FXIFY \$149 / BG \$243. \$5k stays the shop floor. No \$200k Instant.

9. Rec vs BE / 20 / 40 / 60 (±%) and list

BE is the dollar fee, then (rec – BE) / BE. Other ±% columns are (rec – column) / column. Negative = rec is cheaper than that fee. List = rec ÷ 0.65 so VERO35 still lands on the card.

Plan	Size	Rec	List	BE \$ (±%)	vs 20%	vs 40%	vs 60%	vs 13 Aug	vs median
Instant	\$5,000	\$49	\$75	\$14 (+245%)	+176%	+107%	+38%	-32%	-22%

10. Rec vs family low / median / average / high (context only)

% is (rec – stat) / stat. Negative = cheaper than that mark. Family = every Instant, every 1-step, or every 2-step — the page a customer opens. Sers Hyper Growth (\$260 / \$450) pulls 1-step \$5k / \$10k average up; ignore it.

Plan	Size	n	Rec	Low	±%	Median	±%	Average	±%	High	±%	Attractive?
