

Verdict. Classic 2-Step prints on every size at WELCOME25. Instant Growth \$10k @ \$299 prints fat on the first cash-out (m +87%) — residual risk is the doubling tower, not L1. PFP 2-Step access is the hole from \$100k (–23% vs first-payout E[X]), but the funded-account fee (1–3% of size, paid at pass) puts the full funnel back in the black (~+60% leftover at \$100k). Hive Coin is a coupon, not cash, so it is not in E[X] and not in BE. News is allowed. CFD book. A-book clawback is not in E[X] — leftover is a floor for the firm.

How the firm is built

Plan	Phases / DD	Funded split / extra	What prints?
Classic 2-Step	8% then 6%. 5% EOD daily (NewBee) / 10% static. 3% max/trade. 3 days ≥1% of initial. No consistency. Weekend eval yes, funded no.	NewBee 70% · WorkerBee 80% 4% daily · QueenBee 90% 3% daily. Hive Coin 200% of fee on pass, max 50% of next price (coupon, not cash).	Every size at WELCOME25. \$100k sale \$262 vs E[X] \$89, leftover \$173, m +66%.
PFP 2-Step	Same 8/6 · 5/10. Access fee per phase. Funded fee 1 / 2 / 2.5 / 3% of size (Low / Mod / Med / High).	Low/Mod 100% from first profits. Med/High 50% of funded fee upfront, rest from profits. Split only on A-book PnL.	Access-only hole from \$100k. With funded fee, funnel leftover ~\$135 at \$100k, m ~+60%.
PFP 1-Step	10% target, same 5/10. Access fee once. Same funded-fee ladder.	Same 100% vs 50% upfront as PFP 2-Step. News allowed. Payouts USDC <60s.	Access prints (even \$200k +6%). Funnel leftover ~\$256 at \$100k.
Instant Growth	Start \$10k. 6% static, no daily. 2% max/trade. Scale 6% doubles to \$1M. L1 B-book (one cash-out); L2+ A-book.	80% split. Next-level ~2% of new balance from profits. \$2k/day cap after 6%.	\$10k @ \$299 vs E[X] \$38, leftover \$261, m +87%. Residual = tower, not L1.

Blended funnel · first-payout E[X] per buyer · Hive Coin k = 0

Plan	P1	P2 / eval	Funded	P(payload)	P(yr1)	E[X] \$100k	Days	Split
Classic 2-Step (NewBee)	25.7%	16.7%	13.9%	13.9%	4.3%	\$89	52	70%
Pay From Profits 2-Step	24.1%	15.5%	12.8%	12.8%	4.2%	\$91	51	80%
Pay From Profits 1-Step	22.6%	22.6%	18.4%	18.4%	6.2%	\$141	46	80%
Instant Growth L1	46.0%	46.0%	46.0%	46.0%	15.1%	\$377	6	80%

BE = E[X] because Hive Coin is not cash. Firm leftover = sale – E[X], k = 0. 20 / 40 / 60 are the fees that deliver those margins: $F_m = BE / (1 - m)$. They are charge-this floors, not leftover haircuts. Instant E[X] \$100k (\$377) is the \$10k path scaled to \$100k for the catalog; live Instant is \$10k only, E[X] \$38.

Sticker vs first-payout $E[X]$ · WELCOME25 · Prints? = sale $\geq E[X]$

Sale m = (sale – $E[X]$) / sale. PFP stickers are access fees only — they are not supposed to cover $E[X]$ on their own. See the full-funnel tables below. Instant list = sale \$299 (WELCOME25 not applied on the on-chain print).

SKU	List	Sale	$E[X]$	BE	20%	40%	60%	Leftover	m	Prints?
Classic \$5,000	\$29	\$22	\$4	\$4	\$6	\$7	\$11	\$18	+80%	yes

\$200,000	\$299	\$299	\$421	\$720	\$283	\$437	+61%	yes

How to read this

- **Prints?** on the SKU table is sticker-only: sale ≥ first-payout E[X]. Classic, Instant, and PFP 1-Step all yes. PFP 2-Step \$100k/\$200k no — until you add the funded fee.
- **BE = E[X]** here. Hive Coin (200% of fee on pass, max 50% of next challenge) is a coupon for the next buy, not a cash rebate, so $k = 0$.
- **20 / 40 / 60** are the fees that deliver those margins: $F_m = BE / (1 - m)$. Example Classic \$100k: BE \$89 → 20% = \$111, 40% = \$148, 60% = \$222. They are not “sale minus a haircut.”
- **Instant \$10k @ \$299** is the on-chain Jun 2026 price. L1 is B-book, one cash-out, 80% split, 6% static, no daily. Residual risk is scaling (double at 6%, L2+ A-book, next-level ~2% of new balance from profits).
- **A-book clawback** (TOS: split only on A-book PnL) is not in E[X]. Leftover in these tables is a floor for the firm, not a ceiling.
- **News is allowed.** Weekend holding: eval yes on Classic, funded no. Payouts USDC <60s. 80% of challenge fees locked in the contract as payout liquidity (their FAQ).
- **Book:** industry-calibrated CFD 7 / 22 / 26 / 28 / 17 (Pro / Semi / Average / Aggressive / Lottery). 700 Monte Carlo paths per profile per SKU.

Failure mix · share of all buyers · top reasons

Product	p1 max/trade	p1 max DD	p2 max DD	post M1	time / daily / KYC
Classic 2-Step	40.7%	23.8%	6.6%	5.9%	abandon 5.4% · daily 4.3% · KYC 2.0%
PFP 2-Step	40.3%	24.9%	6.4%	4.9%	abandon 5.3% · daily 5.0% · KYC ~2%
PFP 1-Step	41.0%	25.6%	—	7.4%	abandon 6.5% · daily 4.2% · KYC 2.6%
Instant L1	45.0%	7.6%	—	19.3%	post M3 7.1% · post M12 4.4%

The 3% max/trade (Classic/PFP) and 2% max/trade (Instant) TOS caps are why Lottery and Aggressive almost never pay. That is the print engine.

Caveats

- Classic **list** is from TheTrustedProp, not a scraped checkout (Cloudflare blocked later live fetches). PFP and Instant fees are from the TOS / on-chain feed. Re-check stickers on fundedhive.com before using leftover \$ as a live P&L.
- WorkerBee (80%, 4% daily) and QueenBee (90%, 3% daily) are not priced separately here; NewBee 70% is the Classic default.
- PFP funded-fee expectation uses this book's risk mix, not FundedHive's unpublished mix of Low/Mod/Med/High. If the book is more Lottery than 17%, funded-fee income rises and leftover rises.
- $E[X]$ is first cash-out only. Instant tower, Classic scale, and A-book after first payout are not in the leftover number.
- \$100 minimum reward is assumed (not published). Instant may effectively need the 6% scale target before a full withdrawal.
- A-book clawback is not in $E[X]$; real leftover is higher for the firm.
