

Verodus confirmed book — one PDF

Summary first. Then every calculation table from the BE rank report, the industry report (recomputed), and the recommended-prices report. 16 August 2026.

Reconfirmed. Instant P(pay) 22.1% is first-payout eligibility — correct, do not price on it. Instant year-1 7.16% is the cost rate. Eval P(pay) 8.8% / 10.6% / 12.0% is the eval cost rate. Columns are 20 / 40 / 60. Instant rec sits on the year-1 30% print. Evals stay live. Ignore the industry PDF’s Instant \$1,094 and industry_skus Instant BE \$875.

Use **20 / 40 / 60** as the industry reference columns. Instant rec is the year-1 **30% print** — greater margin that still sells. 40% Instant \$100k (\$473) is Blue Guardian \$467. 60% (\$710) sits above Goat \$559 / Instant Funding \$639 — do not aim Instant there. 10 / 20 / 30 was only a reaction when 40/60 looked too rich as Instant targets. Sale is the recommended VERO35 fee. List = sale ÷ 0.65.

Instant \$5k/\$10k are a shop floor on a \$14/\$28 BE. \$25k+ Instant is the 30–40% print. Eval margins are leftover live VERO35. Part A = rank tables. Part B = industry tables on this basis. Part C = recommended-price tables.

Part A — BE rank report (reconfirmed)

Difficulty D and in-band 20% / 30% ranks. Instant BE is year-1. Tables reprinted from the rank report on the confirmed basis.

Difficulty score and 20% / 30% rank

Every plan gets a difficulty D (0–100). We only rank a peer if it is the same family, the same size, and $|D - D_{Verodus}| \leq 6$. 16 August 2026.

D = 0.55 × rules + 0.45 × book. Rules use the catalog card: daily DD (none / 5% / 4% / 3% / 2%), day’s-high vs SOD, max DD, static vs hybrid vs trail, trail lock (–4), consistency, target ÷ max DD, min days, 2% risk caps, extra eval phases. Book is $100 \times (1 - P(\text{pay}))$ on this Monte Carlo. Higher D = harder to get paid. **Band ±6** is about one daily-DD step after the 0.55 rule weight — tight enough that no-daily Instant cannot sit next to Verodus Instant (D 89.2), and Lite (D 77.7) cannot sit next to Pro (D 64.0).

1. Difficulty score — every plan

One row per product (D does not change with account size). Verodus rows highlighted. Sorted easiest → hardest.

7. What the band does

FundedNext Instant (D 46.9) and FXIFY Standard (D 39.3) are 40+ points below Verodus Instant (D 89.2) — no daily, P(pay) ~53%. They never enter the Instant rank. Blue Guardian Instant is D 84.2 (SOD daily + trail lock), ΔD 5.0 vs us — inside the ±6 band, the closest Instant twin. Instant Funding, Hola Direct, Goat, FP Zero, FXIFY Lite and Alpha Instant are also in-band. Lite (D 77.7) ranks against FN Lite (D 77.1) / For Traders / Ment, not against FTMO 2-Step (D 63.2). Pro (D 64.0) ranks against the FTMO-class 10%/5% set. Same book: 7/22/26/28/17. Instant \$200k removed.

D formula: sim/difficulty.py · band ±6 · SKUs: results/industry_skus.csv · scores: results/difficulty_scores.csv.

Part B — Industry report (calculation tables, reconfirmed)

Same Monte Carlo as the industry PDF. Instant BE / 20 / 40 / 60 / sale m are year-1. Instant rec is the 30% print — 40/60 are reference only. The old industry PDF’s Instant \$1,094 is not a recommendation.

B5. Every industry SKU — street / E[X] / BE \$ / 20 / 40 / 60 / m

Instant rows use year-1 E[X] and year-1 BE. Eval rows use first-payout E[X] and BE = E[X] / (1 – k). Sale m is (sale – E[cost]) / sale on that basis. This replaces the industry PDF’s first-payout Instant 20/40/60 grid.

Part C — Recommended prices (reconfirmed)

VERO35 rec card, BE \$ by size, 20/40/60, Instant peer year-1 margins, every family street fee, rec vs BE \$. Tables reprinted from the recommended-prices report.

Break-even by account and recommended sale

Every Verodus size has a stated BE. Instant uses year-1 cost. 1-Step / Lite / Pro use first-payout + fee refund. Recommended sale is multi-factor — not the family median. 16 August 2026.

Instant BE = $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}}) = \$875.25 \times (7.161\% / 22.07\%) = \text{\$284 at \$100k}$, then $\times \text{size}/100\text{k}$. No refund. **Eval BE** = $E[X] / (1 - P(\text{pay}))$: 1-Step $\$108.10 / 0.91192 = \text{\$119}$; Lite $\$136.01 / 0.89384 = \text{\$152}$; Pro $\$132.54 / 0.88002 = \text{\$151}$ at \$100k, then $\times \text{size}/100\text{k}$. $F_m = \text{BE} / (1 - m)$. List = sale $\div 0.65$. Instant \$200k pulled.

Rec factors: (1) payout BE, then **10% assumption error**, then **\$1 + wage share**, then $\div 0.80$ for 20% marketing; (2) Instant stays under BG / Goat; (3) do not match a peer low that fails that floor (Alpha Instant, Maven \$5k–\$25k, BrightFunded \$200k); (4) 1-Step live already covers — keep it; (5) Lite / small Pro lift to the floor so they are the cheapest solvent 2-step, not the cheapest hole. Instant \$100k \$439 is under FP \$444 and $0.94\times$ BG \$467.

Use 20 / 40 / 60 as the reference columns — that is the industry layout. Instant **target is 30%** (greater margin that still sells). 40% Instant \$100k is \$473 (Blue Guardian \$467). 60% is \$710 (above Goat \$559 / Instant Funding \$639). Do not aim Instant at 40 or 60. Sale is the recommended VERO35 fee. List = sale $\div 0.65$. Instant $E[X]$ and BE are year-1; $P(\text{pay})$ is first-payout eligibility (22.1%). Eval $E[X] / P(\text{pay}) / \text{BE}$ are first-payout + refund. Sale m = $(\text{sale} - E[\text{cost}]) / \text{sale}$.

Green = Instant (year-1). Blue = evals (first-payout). Sale is the opex-checked fee. Instant \$25k/\$50k sit on the fully loaded floor. Lite is no longer the industry low on \$5k–\$25k — those lows do not cover wages.

1d. Wage mix — CAD 10,000 / month across 310 accounts

CAD 10,000 × 0.72 = **USD 7,200 / month**. Spread across a 310-account early book (Instant 98 · 1-Step 67 · Lite 82 · Pro 63). Weight = plan factor × (0.65 + 0.35 × size/100k). Instant 0.85 (no phases), 1-Step 1.00, Lite 1.15, Pro 1.10. Flat average is \$23 / account; Instant \$5k gets \$16, Pro \$200k gets \$43. At 150 accounts/month the wage line roughly doubles; at 600 it halves.

1e. Opex stack — error first, then \$1 + wage, then marketing 20%

Build the fee in order. **(1) Payout BE** (year-1 Instant; first-payout + refund on evals). **(2) Assumption error = 10% of BE**, taken first. **(3) \$1 per account + wage share**. **(4) Marketing 20% of sale** $\Rightarrow S_{\text{opex}} = (\text{BE} \times 1.10 + \$1 + \text{wage}) / 0.80$. Peer low is the cheapest same-family street fee. **Low OK** means that low already covers S_{opex} . If it does not, **First OK** is the cheapest peer that does. Do not match a low that fails the stack.

Instant \$100k: S_{opex} \$422. Alpha \$274 is a hole. FXIFY Lite \$399 is still short. Rec \$439 sits under FP \$444 and BG \$467. Instant \$10k \$69 under FP \$70; \$25k/\$50k \$139 / \$239 under FXIFY / BG. 1-Step lows all cover — keep live (cheapest). Lite sits on/under the first solvent peer. Pro stays a step above Lite and just over Maven from \$50k. Mo. left is leftover × N at the 310-account mix. Book row is the monthly total.

2. Break-even for every Verodus account

This is the number the rest of the card is built on. Instant also shows first-payout E[X] so the old \$875 / \$1,094 path is visible and not used.

Green = Instant (year-1 BE). Blue = evals (first-payout BE). 1-Step \$5k BE is \$6; sale \$36 is leftover live, not a 60% target. Instant \$100k BE is \$284, not \$875. Columns are 20 / 40 / 60. Instant rec is the 30% print.

3. Why Instant first-payout margins were wrong

Same-difficulty Instant (D 84–94): Blue Guardian, Instant Funding, Goat, Hola, FP Zero, FXIFY Lite, Alpha. They charge **\$274–\$839** at \$100k. Our first-payout book put Verodus Instant E[X] at **\$875** and the 20% fee at **\$1,094** — above every peer — and painted those peers at –30% to –95%. A market that keeps selling Instant at Goat / BG / IF prices is not all insolvent. The industry report already said **year-1 (7.2% of buyers) prices Instant**, not first-payout eligibility (22%). First-payout 22% is “hit 5 valid days”; most of those accounts die in month 1 (PropScorer 41% of funded). Sustained Instant is 4–6% (Track360) — this book’s year-1 is 7.2%. **Instant E[cost] = E[X]_{first} × (P_{yr1} / P_{pay})**. Evals stay on first-payout + refund (those margins already matched the shelf).

Blue = live Verodus. Green = rec. On year-1, BG \$467 is +38%, Goat \$559 is +55%, IF \$639 is +57%, Hola \$839 is +60%, rec \$439 is +35%. First-payout column is the old (wrong) Instant basis. 40–60% year-1 takes are what Goat / IF / Hola already charge — too high for a new name.

4. Rec vs BE / 20% / 40% / 60% (Instant = year-1)

Instant: $BE = E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}})$, no refund. Evals: first-payout E[X] and refund $\Rightarrow BE = E[X] / (1 - P(\text{pay}))$. $F_m = BE / (1 - m)$. Rec is the shopper price.

Green = rec is below BE (a hole). Blue = rec equals live and is above BE. Instant rec sits above the opex floor at \$10k+ (\$5k is the shop floor). 1-Step / Lite / Pro stay on live VERO35 — those Rec m figures are leftover pricing power, not a 40/60 target. Green would mean below BE.

5. Instant — every instant street fee

Stack: year-1 BE, +10% error, +\$1, +wage share, then ÷ 0.80 for marketing. Instant \$100k opex floor is \$422; Alpha \$274 fails it. FXIFY Lite \$399 is close but short. Rec \$439 sits under FP \$444 and BG \$467. \$10k \$69 under FP \$70; \$25k/\$50k \$139 / \$239 under FXIFY \$149 / BG \$243. \$5k stays the shop floor. No \$200k Instant.

9. Rec vs BE / 20 / 40 / 60 (±%) and list

BE is the dollar fee, then (rec – BE) / BE. Other ±% columns are (rec – column) / column. Negative = rec is cheaper than that fee. List = rec ÷ 0.65 so VERO35 still lands on the card.

10. Rec vs family low / median / average / high (context only)

% is (rec – stat) / stat. Negative = cheaper than that mark. Family = every Instant, every 1-step, or every 2-step — the page a customer opens. 5ers Hyper Growth (\$260 / \$450) pulls 1-step \$5k / \$10k average up; ignore it.
