

Break-even by account and recommended sale

Every Verodus size has a stated BE. Instant uses year-1 cost. 1-Step / Lite / Pro use first-payout + fee refund. Recommended sale is multi-factor — not the family median. 16 August 2026.

Instant BE = $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}}) = \$875.25 \times (7.161\% / 22.07\%) = \textbf{\$284 at \$100k}$, then $\times \text{size}/100\text{k}$. No refund. **Eval BE** = $E[X] / (1 - P(\text{pay}))$: 1-Step $\$108.10 / 0.91192 = \textbf{\$119}$; Lite $\$136.01 / 0.89384 = \textbf{\$152}$; Pro $\$132.54 / 0.88002 = \textbf{\$151}$ at \$100k, then $\times \text{size}/100\text{k}$. $F_m = BE / (1 - m)$. List = sale $\div 0.65$. Instant \$200k pulled.

Rec factors: (1) payout BE, then **10% assumption error**, then **\$1 + wage share**, then $\div 0.80$ for 20% marketing; (2) Instant stays under BG / Goat; (3) do not match a peer low that fails that floor (Alpha Instant, Maven \$5k–\$25k, BrightFunded \$200k); (4) 1-Step live already covers — keep it; (5) Lite / small Pro lift to the floor so they are the cheapest *solvent* 2-step, not the cheapest hole. Instant \$100k \$449 is $0.96 \times$ BG \$467 (opex floor \$422, leftover ~\$21).

Use 20 / 40 / 60 as the reference columns — that is the industry layout. Instant **target is 30%** (greater margin that still sells). 40% Instant \$100k is \$473 (Blue Guardian \$467). 60% is \$710 (above Goat \$559 / Instant Funding \$639). Do not aim Instant at 40 or 60. Sale is the recommended VERO35 fee. List = sale $\div 0.65$. Instant E[X] and BE are year-1; P(pay) is first-payout eligibility (22.1%). Eval E[X] / P(pay) / BE are first-payout + refund. Sale m = (sale – E[cost]) / sale.

Green = Instant (year-1). Blue = evals (first-payout). Sale is the opex-checked fee. Instant \$25k/\$50k sit on the fully loaded floor. Lite is no longer the industry low on \$5k–\$25k — those lows do not cover wages.

1d. Wage mix — CAD 10,000 / month across 310 accounts

CAD 10,000 × 0.72 = **USD 7,200 / month**. Spread across a 310-account early book (Instant 98 · 1-Step 67 · Lite 82 · Pro 63). Weight = plan factor × (0.65 + 0.35 × size/100k). Instant 0.85 (no phases), 1-Step 1.00, Lite 1.15, Pro 1.10. Flat average is \$23 / account; Instant \$5k gets \$16, Pro \$200k gets \$43. At 150 accounts/month the wage line roughly doubles; at 600 it halves.

1e. Opex stack — error first, then \$1 + wage, then marketing 20%

Build the fee in order. (1) **Payout BE** (year-1 Instant; first-payout + refund on evals). (2) **Assumption error = 10% of BE**, taken first. (3) **\$1 per account + wage share**. (4) **Marketing 20% of sale** ⇒ $S_{\text{opex}} = (\text{BE} \times 1.10 + \$1 + \text{wage}) / 0.80$. Peer low is the cheapest same-family street fee. **Low OK** means that low already covers S_{opex} . If it does not, **First OK** is the cheapest peer that does. Do not match a low that fails the stack.

Green = Instant (year-1 BE). Blue = evals (first-payout BE). 1-Step \$5k BE is \$6; sale \$36 is leftover live, not a 60% target. Instant \$100k BE is \$284, not \$875. Columns are 20 / 40 / 60. Instant rec is the 30% print.

3. Why Instant first-payout margins were wrong

Same-difficulty Instant (D 84–94): Blue Guardian, Instant Funding, Goat, Hola, FP Zero, FXIFY Lite, Alpha. They charge **\$274–\$839** at \$100k. Our first-payout book put Verodus Instant E[X] at **\$875** and the 20% fee at **\$1,094** — above every peer — and painted those peers at –30% to –95%. A market that keeps selling Instant at Goat / BG / IF prices is not all insolvent. The industry report already said **year-1 (7.2% of buyers) prices Instant**, not first-payout eligibility (22%). First-payout 22% is “hit 5 valid days”; most of those accounts die in month 1 (PropScorer 41% of funded). Sustained Instant is 4–6% (Track360) — this book’s year-1 is 7.2%. **Instant E[cost] = $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}})$** . Evals stay on first-payout + refund (those margins already matched the shelf).

Blue = live Verodus. Green = rec. On year-1, BG \$467 is +38%, Goat \$559 is +55%, IF \$639 is +57%, Hola \$839 is +60%, rec \$449 is +37%. First-payout column is the old (wrong) Instant basis. 40–60% year-1 takes are what Goat / IF / Hola already charge — too high for a new name.

4. Rec vs BE / 20% / 40% / 60% (Instant = year-1)

Instant: $BE = E[X]_{first} \times (P_{yr1} / P_{pay})$, no refund. Evals: first-payout E[X] and refund $\Rightarrow BE = E[X] / (1 - P(pay))$. $F_m = BE / (1 - m)$. Rec is the shopper price.

Green = rec is below BE (a hole). Blue = rec equals live and is above BE. Instant rec sits on the 30% year-1 print at \$25k+ (\$5k/\$10k are the shop floor). 1-Step / Lite / Pro stay on live VERO35 — those Rec m figures are leftover pricing power, not a 40/60 target. Green would mean below BE.

5. Instant — every instant street fee

Stack: year-1 BE, +10% error, +\$1, +wage share, then ÷ 0.80 for marketing. Instant \$100k opex floor is \$422; Alpha \$274 fails it. FXIFY Lite \$399 is close but short. Rec \$449 covers with a ~\$21 stub and is 0.96× BG \$467. \$10k–\$50k \$79 / \$139 / \$239 stay under BG \$156 / \$243. \$5k stays the shop floor. No \$200k Instant.

9. Rec vs BE / 20 / 40 / 60 (±%) and list

BE is the dollar fee, then (rec – BE) / BE. Other ±% columns are (rec – column) / column. Negative = rec is cheaper than that fee. List = rec ÷ 0.65 so VERO35 still lands on the card.

10. Rec vs family low / median / average / high (context only)

% is (rec – stat) / stat. Negative = cheaper than that mark. Family = every Instant, every 1-step, or every 2-step — the page a customer opens. 5ers Hyper Growth (\$260 / \$450) pulls 1-step \$5k / \$10k average up; ignore it.
