

# Break-even by account and recommended sale

Every Verodus size has a stated BE. Instant uses year-1 cost. 1-Step / Lite / Pro use first-payout + fee refund. Recommended sale is multi-factor — not the family median. 16 August 2026.

**Instant BE** =  $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}}) = \$875.25 \times (7.161\% / 22.07\%) = \text{\$284 at \$100k}$ , then  $\times \text{size}/100\text{k}$ . No refund. **Eval BE** =  $E[X] / (1 - P(\text{pay}))$ : 1-Step  $\$108.10 / 0.91192 = \text{\$119}$ ; Lite  $\$136.01 / 0.89384 = \text{\$152}$ ; Pro  $\$132.54 / 0.88002 = \text{\$151}$  at \$100k, then  $\times \text{size}/100\text{k}$ .  $F_m = BE / (1 - m)$ . List = sale  $\div 0.65$ . Instant \$200k pulled.

**Rec factors:** (1) Instant prints at the year-1 **30%** column — greater margin that still sells; 20% was thin (+21%, \$25k under Alpha) and 40% / 60% were too rich versus BG / Goat / IF; (2) \$5k/\$10k Instant use a shop floor because year-1 30% is \$20 / \$41; (3) sit under BG and Goat from \$10k, under Instant Funding and Hola everywhere; (4) never raise a live eval that is already the cheapest name and fat; (5) shop-round fees. Columns on this card use **20 / 40 / 60** as the industry reference. Instant rec is the **30% print, then opex-checked** — \$429 at \$100k is  $0.92 \times \text{BG } \$467$  (opex floor \$392). 40% (\$473) is Blue Guardian and 60% (\$710) sits above Goat / Instant Funding.

## 1. Recommended Verodus sale (VERO35)

| Plan        | \$5k            | \$10k           | \$25k            | \$50k             | \$100k            | \$200k            | BE \$100k | Live \$100k | Rec m |
|-------------|-----------------|-----------------|------------------|-------------------|-------------------|-------------------|-----------|-------------|-------|
| Instant     | \$59<br>BE \$14 | \$69<br>BE \$28 | \$119<br>BE \$71 | \$219<br>BE \$142 | \$429<br>BE \$284 | —                 | \$284     | \$676       | +34%  |
| 1-Step      | \$36<br>BE \$6  | \$60<br>BE \$12 | \$120<br>BE \$30 | \$193<br>BE \$59  | \$335<br>BE \$119 | \$654<br>BE \$237 | \$119     | \$335       | +59%  |
| 2-Step Lite | \$18<br>BE \$8  | \$33<br>BE \$15 | \$66<br>BE \$38  | \$133<br>BE \$76  | \$241<br>BE \$152 | \$477<br>BE \$304 | \$152     | \$241       | +33%  |
| 2-Step Pro  | \$20<br>BE \$8  | \$36<br>BE \$15 | \$85<br>BE \$38  | \$163<br>BE \$75  | \$296<br>BE \$151 | \$577<br>BE \$301 | \$151     | \$296       | +43%  |

Green = recommended sale. Each size shows **rec \$** and **BE \$**. Instant is the year-1 30% print. Evals are unchanged. Instant \$100k rec \$429 on year-1 BE \$284 (opex floor \$392, 30% = \$406, 40% = \$473, 60% = \$710). Eval Sale m of +33% to +59% is live VERO35 leftover — not a 60% target.

## 1b. Break-even fee (\$)

Same sizes as the rec card. Instant = year-1, no refund. Evals = first-payout + fee refund.

| Plan        | \$5k | \$10k | \$25k | \$50k | \$100k | \$200k | Basis          |
|-------------|------|-------|-------|-------|--------|--------|----------------|
| Instant     | \$14 | \$28  | \$71  | \$142 | \$284  | —      | year-1         |
| 1-Step      | \$6  | \$12  | \$30  | \$59  | \$119  | \$237  | first + refund |
| 2-Step Lite | \$8  | \$15  | \$38  | \$76  | \$152  | \$304  | first + refund |
| 2-Step Pro  | \$8  | \$15  | \$38  | \$75  | \$151  | \$301  | first + refund |

Instant \$100k BE is **\$284**. 1-Step \$119 · Lite \$152 · Pro \$151. Then  $\times \text{size}/100\text{k}$ .

## 1c. Plan / Size / List / Sale / E[X] / P(pay) / BE / 20% / 40% / 60% / Sale m

**Use 20 / 40 / 60 as the reference columns** — that is the industry layout. Instant **target is 30%** (greater margin that still sells). 40% Instant \$100k is \$473 (Blue Guardian \$467). 60% is \$710 (above Goat \$559 / Instant Funding \$639). Do not aim Instant at 40 or 60. Sale is the recommended VERO35 fee. List = sale  $\div 0.65$ . Instant E[X] and BE are year-1; P(pay) is first-payout eligibility (22.1%). Eval E[X] / P(pay) / BE are first-payout + refund. Sale m = (sale – E[cost]) / sale.

| Plan    | Size     | List  | Sale  | E[X]  | P(pay) | BE    | 20%   | 40%   | 60%   | Sale m |

Green = Instant (year-1). Blue = evals (first-payout). Instant \$25k+ Sale sits on the 30% column, then \$100k is lifted to \$429 so the opex stack still leaves a wage stub. \$5k/\$10k Instant Sale m is the shop floor, not a 60% target. Lite \$100k Sale \$241 is under the 40% column (\$254). 1-Step / Pro Sale sit between 40% and 60%.

1d. Opex stack — error first, then \$1 + marketing 20%, then wages

Build the fee in order. **(1) Payout BE** (year-1 Instant; first-payout + refund on evals). **(2) Assumption error = 10% of BE** — year-1 / book miss, taken first. **(3) \$1 per account**. **(4) Marketing 20% of sale** ⇒ opex floor  $S_{opex} = (BE \times 1.10 + \$1) / 0.80$ . **(5) Wages CAD 10,000/month × 0.72 = USD 7,200**. N wages = \$7,200 / leftover after (1)–(4) at the rec sale — Instant-only headcount if that SKU had to carry the whole wage bill. Peer low is the cheapest same-family street fee. **Low OK** means that low already covers  $S_{opex}$ . If it does not, **First OK** is the cheapest peer that does. Do not match a low that fails the stack (Alpha Instant \$100k \$274).

| Plan        | Size      | BE    | +10% err | Loaded | Opex \$ | Peer low            | Low OK?   | First OK \$         | Rec   | After opex | N wages |

Instant \$100k: S<sub>opex</sub> \$392. Alpha \$274 is a hole after 20% marketing. FXIFY Lite \$399 is the first sufficient low. Rec \$429 leaves ~\$30 after the stack — about 240 Instant \$100k / month if Instant carried all wages. Evals cover wages much faster (1-Step \$100k ~50 / month). A 25/25/25/25 mix of the four \$100k plans at rec covers CAD 10k at about 110 accounts / month. Lite is the tight eval (leftover ~\$24 at \$241). Instant \$25k Alpha \$118 covers the stack — that is a real low we can meet. Instant \$50k Alpha \$154 does not; FP Zero \$195 is on the \$196 floor. Rec \$219 covers and stays under BG \$243.

2. Break-even for every Verodus account

This is the number the rest of the card is built on. Instant also shows first-payout E[X] so the old \$875 / \$1,094 path is visible and not used.

| Plan        | Size      | Basis  | E[X] used | P(payment) | Year-1 | BE \$ | 20%   | 40%   | 60%   | Live  | Rec   |

Green = Instant (year-1 BE). Blue = evals (first-payout BE). 1-Step \$5k BE is \$6; sale \$36 is leftover live, not a 60% target. Instant \$100k BE is \$284, not \$875. Columns are 20 / 40 / 60. Instant rec is the 30% print.

### 3. Why Instant first-payout margins were wrong

Same-difficulty Instant (D 84–94): Blue Guardian, Instant Funding, Goat, Hola, FP Zero, FXIFY Lite, Alpha. They charge **\$274–\$839** at \$100k. Our first-payout book put Verodus Instant E[X] at **\$875** and the 20% fee at **\$1,094** — above every peer — and painted those peers at –30% to –95%. A market that keeps selling Instant at Goat / BG / IF prices is not all insolvent. The industry report already said **year-1 (7.2% of buyers) prices Instant**, not first-payout eligibility (22%). First-payout 22% is “hit 5 valid days”; most of those accounts die in month 1 (PropScorer 41% of funded). Sustained Instant is 4–6% (Track360) — this book’s year-1 is 7.2%. **Instant E[*cost*] = E[X]<sub>first</sub> × (P<sub>yr1</sub> / P<sub>pay</sub>)**. Evals stay on first-payout + refund (those margins already matched the shelf).

| Firm            | Plan             | D    | Sale  | P( <i>pay</i> ) | Year-1 | E[X] first | m first | E[X] yr1 | m yr1 |
|-----------------|------------------|------|-------|-----------------|--------|------------|---------|----------|-------|
| Alpha Capital   | Instant          | 94.2 | \$274 | 13.0%           | 4.2%   | \$690      | -152%   | \$223    | +19%  |
| FXIFY           | Instant Lite     | 92.9 | \$399 | 15.7%           | 5.1%   | \$680      | -70%    | \$218    | +45%  |
| FundingPips     | Zero             | 92.7 | \$444 | 15.3%           | 5.0%   | \$829      | -87%    | \$271    | +39%  |
| Blue Guardian   | Instant          | 84.2 | \$467 | 22.1%           | 7.1%   | \$911      | -95%    | \$292    | +38%  |
| Goat Funded     | Instant GOAT     | 92.5 | \$559 | 16.6%           | 4.9%   | \$846      | -51%    | \$250    | +55%  |
| Instant Funding | Instant          | 88.0 | \$639 | 21.4%           | 6.9%   | \$841      | -32%    | \$272    | +57%  |
| FXIFY           | Instant Standard | 39.3 | \$639 | 54.2%           | 17.9%  | \$716      | -12%    | \$237    | +63%  |
| Verodus         | Instant          | 89.2 | \$676 | 22.1%           | 7.2%   | \$875      | -29%    | \$284    | +58%  |
| Hola Prime      | Direct           | 89.3 | \$839 | 23.8%           | 8.7%   | \$920      | -10%    | \$338    | +60%  |
| Verodus rec     | Instant          | 89.2 | \$429 | 22.1%           | 7.2%   | \$875      | -104%   | \$284    | +34%  |

Blue = live Verodus. Green = rec. On year-1, BG \$467 is +38%, Goat \$559 is +55%, IF \$639 is +57%, Hola \$839 is +60%, rec \$429 is +33%. First-payout column is the old (wrong) Instant basis. 40–60% year-1 takes are what Goat / IF / Hola already charge — too high for a new name.

### 4. Rec vs BE / 20% / 40% / 60% (Instant = year-1)

Instant: **BE = E[X]<sub>first</sub> × (P<sub>yr1</sub> / P<sub>pay</sub>)**, no refund. Evals: first-payout E[X] and refund ⇒ **BE = E[X] / (1 – P(*pay*))**. F<sub>m</sub> = BE / (1 – m). Rec is the shopper price.

| Plan        | Size      | Rec   | Rec m | E[X]  | BE \$ | 20%   | 40%   | 60%   | Live  | Median |
|-------------|-----------|-------|-------|-------|-------|-------|-------|-------|-------|--------|

Green = rec is below BE (a hole). Blue = rec equals live and is above BE. Instant rec sits on the 30% year-1 print at \$25k+ (\$5k/\$10k are the shop floor). 1-Step / Lite / Pro stay on live VERO35 — those Rec m figures are leftover pricing power, not a 40/60 target. Green would mean below BE.

5. Instant — every instant street fee

Stack: year-1 BE, then +10% assumption error, +\$1/account, then ÷ 0.80 for 20% marketing. Instant \$100k opex floor is \$392; Alpha \$274 fails it. First sufficient low is FXIFY Lite \$399. Rec \$429 is the 30% print plus a small wage stub, 0.92× BG \$467, under Goat \$559. \$5k/\$10k stay the shop floor. \$25k \$119 sits on Alpha \$118 (that low covers the stack). No \$200k Instant.

| Firm            | Plan             | \$5k | \$10k | \$25k | \$50k | \$100k | \$200k |
|-----------------|------------------|------|-------|-------|-------|--------|--------|

9. Rec vs BE / 20 / 40 / 60 (±%) and list

BE is the dollar fee, then (rec – BE) / BE. Other ±% columns are (rec – column) / column. Negative = rec is cheaper than that fee. List = rec ÷ 0.65 so VERO35 still lands on the card.

| Plan        | Size      | Rec   | List    | BE \$ (±%)    | vs 20% | vs 40% | vs 60% | vs live | vs median |
|-------------|-----------|-------|---------|---------------|--------|--------|--------|---------|-----------|

10. Rec vs family low / median / average / high (context only)

% is (rec – stat) / stat. Negative = cheaper than that mark. Family = every Instant, every 1-step, or every 2-step — the page a customer opens. 5ers Hyper Growth (\$260 / \$450) pulls 1-step \$5k / \$10k average up; ignore it.

| Plan        | Size      | n  | Rec   | Low   | ±%    | Median | ±%   | Average | ±%   | High    | ±%   | Attractive?               |
|-------------|-----------|----|-------|-------|-------|--------|------|---------|------|---------|------|---------------------------|
| Instant     | \$5,000   | 9  | \$59  | \$39  | +51%  | \$63   | -6%  | \$66    | -11% | \$99    | -40% | yes — at/under median     |
