

Verodus complete operator report

One document. P(pay) audited. Instant priced on year-1. Evals on first-payout + refund. Recommended sale, BE \$, 20/40/60, peers, and margin % by size and family. 16 August 2026.

This replaces the three earlier PDFs for decisions. **Industry report** still prices Instant on first-payout 22% (BE \$875, 20% = \$1,094) — that path is wrong for Instant. **Rank report** is difficulty only. **Recommended-prices PDF** matches this card. Ignore **verodus_blended.csv** (old harsh book: Instant P(pay) 2.8%).

1. Is P(pay) correct?

Yes — if you keep the two Instant numbers apart. In this book P(pay) is **first-payout eligibility**: the share of buyers who collect a first reward of at least \$100. It is not “still paying at month 12”. Year-1 is that later number. Instant must be priced on year-1. Evals stay on first-payout + fee refund (those already match the shelf).

Instant has no challenge. The engine treats “phase 1 = funded = paid” as soon as the trader posts **5 valid days at +0.5% of start-of-day**, keeps 20% consistency, and clears the \$100 floor at an 80% split. That is a low bar for a skilled book and an impossible bar for Aggressive / Lottery (45% of buyers), who blow the 6% trail on day 1. The 22.1% blend is those two facts together — not “one in five Instant buyers is a year-1 survivor.”

Plan	What P(pay) is	P(pay)	Year-1	Use for price?	Verdict
Instant	5 valid days + \$100 (no eval)	22.1%	7.2%	No — use year-1 7.16%	Correct as first-pay; do not price on it
1-Step	Pass 10% / 4% / 6% hybrid + funded + \$100	8.8%	2.9%	Yes — first-payout + refund	Correct. Harder than FTMO 1-Step 13.5%
2-Step Lite	Pass 8/8 then 5/8 + funded 8% DD + \$100	10.6%	3.4%	Yes — first-payout + refund	Correct. Near FTMO 12.7% / FN Lite 12.0%
2-Step Pro	Pass 10/10 then 5/10 + funded + \$100	12.0%	4.2%	Yes — first-payout + refund	Correct. FTMO 2-step twin is 12.7%

Check: Instant year-1 = 22.07% × 0.59 × 0.72 × 0.76 = 7.13% (book prints 7.161%). Post-pay death is PropScorer-class (41% of funded die in month 1). Track360 sustained Instant is 4–6%; this book is a touch optimistic at 7.2%, not a different order of magnitude. Pricing Instant on 22% produced the old \$1,094 “20% fee” that sat above every peer.

2. P(pay) by trader type — why Instant is 22%, not 50%

Book mix is 7% Pro / 22% Semi-skilled / 26% Average / 28% Aggressive / 17% Lottery. Instant 22.1% = 0.07×76.2% + 0.22×58.7% + 0.26×14.7% + 0.28×0 + 0.17×0. Almost half the book never collects. That is realistic for a 6% trail that never locks.

Plan	Pro 7%	Semi 22%	Average 26%	Aggressive 28%	Lottery 17%	Blend P(pay)	Blend year-1
Instant	76.2%	58.7%	14.7%	0.0%	0.0%	22.1%	7.2%
1-Step	41.0%	22.5%	3.8%	0.0%	0.0%	8.8%	2.9%
2-Step Lite	57.4%	26.8%	2.7%	0.0%	0.0%	10.6%	3.4%
2-Step Pro	63.4%	32.0%	2.0%	0.0%	0.0%	12.0%	4.2%

3. Book vs published funnel and closest twins

The book was calibrated so an FTMO-style 10/5 · 5/10 static 2-step lands near Track360 / FPFx / FTMO: Phase 1 ~25–30%, funded ~10–12%, ever-paid ~7%, year-1 ~1–3%. Actual FTMO 2-step in this run: P1 21.8%, funded = P(pay) 12.7%, year-1 4.2%. Funded equals P(pay) because almost every funded path clears \$100. Track360’s 7% “ever paid” is a bit lower (some funded accounts never request). Relative ranks still hold. Instant twins with a daily + 6% trail sit at 21–24% first-pay; no-daily Instant (FXIFY Standard, FN Stellar Instant) sits at ~53%.

Green = Instant (price on year-1). Blue = Verodus evals. Verodus Instant P(pay) 22.1% matches Blue Guardian 22.1% and Instant Funding 21.4%. That is the check that 22% is not a bug.

5. Cost basis and BE \$ (the number the card is built on)

Instant $E[\text{cost}] = E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}}) = \$875.25 \times (7.161\% / 22.07\%) = \textbf{\$284 at \$100k}$, no refund, then $\times \text{size}/100\text{k}$. **Eval** $BE = E[X] / (1 - P(\text{pay}))$: 1-Step $\$108.10 / 0.91192 = \textbf{\$119}$; Lite $\$136.01 / 0.89384 = \textbf{\$152}$; Pro $\$132.54 / 0.88002 = \textbf{\$151}$. $F_m = BE / (1 - m)$. Columns are **20 / 40 / 60** — the industry layout. Instant rec is the 20% print. 40% and 60% are reference only (too rich versus Goat / Instant Funding as Instant targets).

Plan	\$5k	\$10k	\$25k	\$50k	\$100k	\$200k	Basis

2-Step Pro	\$8	\$15	\$38	\$75	\$151	\$301	first + refund

6. Recommended VERO35 sale (rec \$ over BE \$)

Instant sits on the year-1 20% print, with a shop floor on \$5k/\$10k. Evals stay live — already the cheapest (or #2) name and fat versus BE.

Plan	\$5k	\$10k	\$25k	\$50k	\$100k	\$200k	BE \$100k	Live \$100k

Instant rec $\$59 / \$69 / \$99 / \$189 / \$359$. \$100k \$359 is under BG \$467, Goat \$559, Instant Funding \$639. List = $\text{rec} \div 0.65$ so VERO35 still lands.

7. Plan / Size / List / Sale / E[X] / P(pay) / BE / 20% / 40% / 60% / Sale m

Use **20 / 40 / 60** as the industry reference. Instant rec is the year-1 **20% print**. 40% Instant \$100k is \$473 (Blue Guardian \$467). 60% is \$710 (above Goat \$559 / Instant Funding \$639). Do not aim Instant at 40 or 60. 10 / 20 / 30 was only a reaction when 40/60 looked too rich as Instant targets. Sale is the recommended VERO35 fee. List = sale ÷ 0.65. Instant E[X] / BE are year-1; P(pay) is first-payout 22.1%.

8. Instant \$100k peers — first-payout vs year-1

Same-difficulty Instant (daily + ~6% trail) charges \$274–\$839. First-payout margins on those stickers are negative. Year-1 margins are +38% to +60%. That is why the old \$1,094 Instant fee was rejected.

11. Margin % for every account size and family

Rec m = (rec – E[cost]) / rec. Instant E[cost] is year-1 E[X]. Eval E[cost] is first-payout E[X] + expected fee refund. Live m uses the same cost on today’s VERO35 sale. \$5k/\$10k Instant look fat because the shop floor (\$59 / \$69) sits on a \$14 / \$28 BE — that is a floor, not a 60% target. \$25k+ Instant is the 20–28% print.
