

Break-even by account and recommended sale

Every Verodus size has a stated BE. Instant uses year-1 cost. 1-Step / Lite / Pro use first-payout + fee refund. Recommended sale is multi-factor — not the family median. 16 August 2026.

Instant BE = $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}}) = \$875.25 \times (7.161\% / 22.07\%) = \textbf{\$284 at \$100k}$, then $\times \text{size}/100\text{k}$. No refund. **Eval BE** = $E[X] / (1 - P(\text{pay}))$: 1-Step $\$108.10 / 0.91192 = \textbf{\$119}$; Lite $\$136.01 / 0.89384 = \textbf{\$152}$; Pro $\$132.54 / 0.88002 = \textbf{\$151}$ at \$100k, then $\times \text{size}/100\text{k}$. $F_m = BE / (1 - m)$. List = sale $\div 0.65$. Instant \$200k pulled.

Rec factors: (1) payout BE, then **10% assumption error**, then **\$1 + wage share**, then $\div 0.80$ for 20% marketing; (2) Instant stays under BG / Goat; (3) do not match a peer low that fails that floor (Alpha Instant, Maven \$5k–\$25k, BrightFunded \$200k); (4) 1-Step live already covers — keep it; (5) Lite / small Pro lift to the floor so they are the cheapest solvent 2-step, not the cheapest hole. Instant \$100k \$429 is $0.92 \times \text{BG } \$467$ (opex floor \$422).

1. Recommended Verodus sale (VERO35)

Plan	\$5k	\$10k	\$25k	\$50k	\$100k	\$200k	BE \$100k	Live \$100k	Rec m
Instant	\$59 BE \$14	\$69 BE \$28	\$129 BE \$71	\$229 BE \$142	\$429 BE \$284	—	\$284	\$676	+34%
1-Step	\$36 BE \$6	\$60 BE \$12	\$120 BE \$30	\$193 BE \$59	\$335 BE \$119	\$654 BE \$237	\$119	\$335	+59%
2-Step Lite	\$39 BE \$8	\$51 BE \$15	\$89 BE \$38	\$149 BE \$76	\$259 BE \$152	\$479 BE \$304	\$152	\$241	+38%
2-Step Pro	\$39 BE \$8	\$49 BE \$15	\$85 BE \$38	\$163 BE \$75	\$296 BE \$151	\$577 BE \$301	\$151	\$296	+43%

Green = recommended sale. Each size shows **rec \$** and **BE \$**. Instant \$59 / \$69 / \$129 / \$229 / \$429. Lite \$39 / \$51 / \$89 / \$149 / \$259 / \$479 (opex floor; under Maven from \$50k). 1-Step stays live. Pro \$5k/\$10k lift to \$39 / \$49; \$25k+ live.

1b. Break-even fee (\$)

Same sizes as the rec card. Instant = year-1, no refund. Evals = first-payout + fee refund.

Plan	\$5k	\$10k	\$25k	\$50k	\$100k	\$200k	Basis
Instant	\$14	\$28	\$71	\$142	\$284	—	year-1
1-Step	\$6	\$12	\$30	\$59	\$119	\$237	first + refund
2-Step Lite	\$8	\$15	\$38	\$76	\$152	\$304	first + refund
2-Step Pro	\$8	\$15	\$38	\$75	\$151	\$301	first + refund

Instant \$100k BE is **\$284**. 1-Step \$119 · Lite \$152 · Pro \$151. Then $\times \text{size}/100\text{k}$.

1c. Plan / Size / List / Sale / E[X] / P(pay) / BE / 20% / 40% / 60% / Sale m

Use 20 / 40 / 60 as the reference columns — that is the industry layout. Instant **target is 30%** (greater margin that still sells). 40% Instant \$100k is \$473 (Blue Guardian \$467). 60% is \$710 (above Goat \$559 / Instant Funding \$639). Do not aim Instant at 40 or 60. Sale is the recommended VERO35 fee. List = sale $\div 0.65$. Instant $E[X]$ and BE are year-1; $P(\text{pay})$ is first-payout eligibility (22.1%). Eval $E[X] / P(\text{pay}) / \text{BE}$ are first-payout + refund. Sale m = $(\text{sale} - E[\text{cost}]) / \text{sale}$.

Plan	Size	List	Sale	E[X]	P(pay)	BE	20%	40%	60%	Sale m

Green = Instant (year-1). Blue = evals (first-payout). Sale is the opex-checked fee. Instant \$25k/\$50k sit on the fully loaded floor. Lite is no longer the industry low on \$5k–\$25k — those lows do not cover wages.

1d. Wage mix — CAD 10,000 / month across 310 accounts

CAD 10,000 × 0.72 = **USD 7,200 / month**. Spread across a 310-account early book (Instant 98 · 1-Step 67 · Lite 82 · Pro 63). Weight = plan factor × (0.65 + 0.35 × size/100k). Instant 0.85 (no phases), 1-Step 1.00, Lite 1.15, Pro 1.10. Flat average is \$23 / account; Instant \$5k gets \$16, Pro \$200k gets \$43. At 150 accounts/month the wage line roughly doubles; at 600 it halves.

Plan	Size	N / mo	Weight	Wage \$	Share of wages
Instant	\$5,000	15	0.57	\$16	3.4%

1e. Opex stack — error first, then \$1 + wage, then marketing 20%

Build the fee in order. (1) **Payout BE** (year-1 Instant; first-payout + refund on evals). (2) **Assumption error = 10% of BE**, taken first. (3) **\$1 per account + wage share**. (4) **Marketing 20% of sale** $\Rightarrow S_{\text{opex}} = (\text{BE} \times 1.10 + \$1 + \text{wage}) / 0.80$. Peer low is the cheapest same-family street fee. **Low OK** means that low already covers S_{opex} . If it does not, **First OK** is the cheapest peer that does. Do not match a low that fails the stack.

Plan	Size	Wage	BE	+10%	\$1+w	Opex \$	Peer low	Low OK?	First OK \$	Rec	After

Instant \$100k: $S_{\text{opex}} = \$422$. Alpha \$274 is a hole. FXIFY Lite \$399 is still short. Rec \$429 covers and stays under BG \$467. Instant \$25k/\$50k Alpha \$118 / \$154 fail; rec \$129 / \$229 clear the floor and stay under BG \$156 / \$243. 1-Step lows all cover — keep live. Lite live and Maven \$5k–\$25k fail; rec is the cheapest solvent 2-step. Maven \$151 / \$279 cover Lite \$50k / \$100k — we sit just under them. Book P&L after the stack at this mix is positive (1-Step / Pro \$100k+ carry).

2. Break-even for every Verodus account

This is the number the rest of the card is built on. Instant also shows first-payout $E[X]$ so the old \$875 / \$1,094 path is visible and not used.

Plan	Size	Basis	E[X] used	P(pay)	Year-1	BE \$	20%	40%	60%	Live	Rec

Green = Instant (year-1 BE). Blue = evals (first-payout BE). 1-Step \$5k BE is \$6; sale \$36 is leftover live, not a 60% target. Instant \$100k BE is \$284, not \$875. Columns are 20 / 40 / 60. Instant rec is the 30% print.

3. Why Instant first-payout margins were wrong

Same-difficulty Instant (D 84–94): Blue Guardian, Instant Funding, Goat, Hola, FP Zero, FXIFY Lite, Alpha. They charge **\$274–\$839** at \$100k. Our first-payout book put Verodus Instant E[X] at **\$875** and the 20% fee at **\$1,094** — above every peer — and painted those peers at –30% to –95%. A market that keeps selling Instant at Goat / BG / IF prices is not all insolvent. The industry report already said **year-1 (7.2% of buyers) prices Instant**, not first-payout eligibility (22%). First-payout 22% is “hit 5 valid days”; most of those accounts die in month 1 (PropScorer 41% of funded). Sustained Instant is 4–6% (Track360) — this book’s year-1 is 7.2%. **Instant E[cost] = E[X]_{first} × (P_{yr1} / P_{pay})**. Evals stay on first-payout + refund (those margins already matched the shelf).

Firm	Plan	D	Sale	P(pay)	Year-1	E[X] first	m first	E[X] yr1	m yr1
Alpha Capital	Instant	94.2	\$274	13.0%	4.2%	\$690	-152%	\$223	+19%
FXIFY	Instant Lite	92.9	\$399	15.7%	5.1%	\$680	-70%	\$218	+45%
FundingPips	Zero	92.7	\$444	15.3%	5.0%	\$829	-87%	\$271	+39%
Blue Guardian	Instant	84.2	\$467	22.1%	7.1%	\$911	-95%	\$292	+38%
Goat Funded	Instant GOAT	92.5	\$559	16.6%	4.9%	\$846	-51%	\$250	+55%
Instant Funding	Instant	88.0	\$639	21.4%	6.9%	\$841	-32%	\$272	+57%
FXIFY	Instant Standard	39.3	\$639	54.2%	17.9%	\$716	-12%	\$237	+63%
Verodus	Instant	89.2	\$676	22.1%	7.2%	\$875	-29%	\$284	+58%
Hola Prime	Direct	89.3	\$839	23.8%	8.7%	\$920	-10%	\$338	+60%
Verodus rec	Instant	89.2	\$429	22.1%	7.2%	\$875	-104%	\$284	+34%

Blue = live Verodus. Green = rec. On year-1, BG \$467 is +38%, Goat \$559 is +55%, IF \$639 is +57%, Hola \$839 is +60%, rec \$429 is +33%. First-payout column is the old (wrong) Instant basis. 40–60% year-1 takes are what Goat / IF / Hola already charge — too high for a new name.

4. Rec vs BE / 20% / 40% / 60% (Instant = year-1)

Instant: $BE = E[X]_{\text{first}} \times (\frac{P_{\text{yr1}}}{P_{\text{pay}}})$, no refund. Evals: first-payout $E[X]$ and refund $\Rightarrow BE = E[X] / (1 - P(\text{pay}))$. $F_m = BE / (1 - m)$. Rec is the shopper price.

Plan	Size	Rec	Rec m	E[X]	BE \$	20%	40%	60%	Live	Median

Green = rec is below BE (a hole). Blue = rec equals live and is above BE. Instant rec sits on the 30% year-1 print at \$25k+ (\$5k/\$10k are the shop floor). 1-Step / Lite / Pro stay on live VERO35 — those Rec m figures are leftover pricing power, not a 40/60 target. Green would mean below BE.

5. Instant — every instant street fee

Stack: year-1 BE, +10% error, +\$1, +wage share, then ÷ 0.80 for marketing. Instant \$100k opex floor is \$422; Alpha \$274 fails it. FXIFY Lite \$399 is close but short. Rec \$429 covers and is 0.92× BG \$467. \$25k/\$50k lift to \$129 / \$229 so the floor clears; still under BG \$156 / \$243. \$5k/\$10k stay the shop floor. No \$200k Instant.

9. Rec vs BE / 20 / 40 / 60 (±%) and list

BE is the dollar fee, then (rec – BE) / BE. Other ±% columns are (rec – column) / column. Negative = rec is cheaper than that fee. List = rec ÷ 0.65 so VERO35 still lands on the card.

Plan	Size	Rec	List	BE \$ (±%)	vs 20%	vs 40%	vs 60%	vs live	vs median

10. Rec vs family low / median / average / high (context only)

% is (rec – stat) / stat. Negative = cheaper than that mark. Family = every Instant, every 1-step, or every 2-step — the page a customer opens. 5ers Hyper Growth (\$260 / \$450) pulls 1-step \$5k / \$10k average up; ignore it.

Plan	Size	n	Rec	Low	±%	Median	±%	Average	±%	High	±%	Attractive?
