

Bookmap — what it is, and why Joe's email still says it

Company file · 22 August 2026 · For Alexander

Bookmap is a paid order-flow heatmap. It is not a prop firm and not Verodus. On 11 August 2026 — ten days before Joe emailed you — Bookmap announced a partnership with 10FOUR, a Hong Kong futures Instant/evaluation shop. Roles in that deal stay clean: Bookmap visualizes; 10FOUR sells challenges. Joe pasted Verodus into Bookmap's product slot instead.

No public link was found between Bookmap and Joe Wong, TradeMath, MoniMath, or World Traders Hub HK. He reused partner language. He did not propose Bookmap then Verodus as a two-vendor stack.

What Bookmap is

Item	Fact
Product	Heatmap of the limit order book (historical liquidity) plus volume dots, ~40 fps. Name = order book + heat map.
Markets	Futures (core), US stocks, crypto. Sits on Rithmic / CQG / dxFeed / Tradovate / NinjaTrader. Not the broker.
Revenue	SaaS. 2026 public bands (data extra): Digital free; Digital+ ~\$19–\$39/mo; Global ~\$49–\$69/mo or ~\$990 life; Global+ ~\$99/mo or ~\$1,990 life.
Company	Bookmap Ltd, Cyprus. Founder/CEO Tsachi Galanos. ~50–60 staff. Not an SFC licensee.
Owner	Nelogica (Porto Alegre) majority stake 1 Nov 2024. Brand continues. ~300k users claimed at deal.
Not	A challenge seller, a payout firm, MT5, TradeHub, or Instant / 1-Step / Lite.

How they partner — the genre of Joe's email

Public pages: bookmap.com/partnering/ and bookmap.com/en/b2b/prop-firms. Broker/FCM partners sell seats. OEM/custom for props, banks, exchanges. Affiliates via FlexOffers. The prop-firm page pitches bulk licenses, record/replay for coaching, and retention (traders return for more evaluations). That is "official partner + order-flow visualization + platform adoption." Bookmap writes it to prop firms. Joe sent it as if Verodus were Bookmap.

Correct split: Bookmap sells heatmap seats. The prop firm sells evaluation fees. Joe inverted it.

Bookmap × 10FOUR (11 Aug 2026)

Bookmap's LinkedIn: traders use Bookmap while trading a 10FOUR evaluation or funded account. 10FOUR (Ten Four Group, HK CR 79713385, Kwun Tong) is a futures sim-prop: Instant, Origin, Daily; \$25k–\$150k; 90% split; CQG; Riseworks. Same category as Verodus (simulated evaluation, Instant language, Rise), different stack (CQG futures vs Platform 5 / TradeHub). Mixed independent reviews; not a recommendation — it is the public pair Bookmap chose ten days before Joe hit send.

Joe is in Hong Kong. The competent two-vendor letter would have been: Bookmap on the tape, a prop shop for challenges. He left "Proposed Partnership with Bookmap" in a letter to you. No evidence Bookmap closed with him. No evidence 10FOUR is in his email. The announcement is the model in the market when he mailed you.

Bookmap vs Verodus

	Bookmap	Verodus
Sells	Heatmap sub + data	Instant / 1-Step / Lite fees
Trader pays	~\$0–\$99/mo + exchange data	Challenge fee (e.g. Instant \$49 at 35% off)
Platform	Own chart + Rithmic/CQG	Platform 5 (MT5, not US) + TradeHub
Pays the trader?	No	Yes, if rules + KYC
Joe's email called it	Institutional-grade order flow	The same phrase, name swapped

A real dual deal would be Verodus buyers buying Bookmap seats (or a bulk license). That is a cost line, not origination. Most futures props that "support Bookmap" only mean Rithmic credentials work. They do not pay the trader's Bookmap sub. 10FOUR is a named co-marketing exception.

What this changes

- Nothing in the commercial posture. It explains the email.
- Bookmap is real and widely used. Mis-assigning its product to Verodus is the error.
- The live HK pattern is Bookmap + 10FOUR, not Bookmap + Verodus.
- If he ever writes a real two-vendor stack, Verodus's slice is still tagged evaluation fees, not heatmap revenue and not OHKF/SFC halo.
- If he wants Bookmap, he deals with Bookmap. If he wants challenge volume, he names Instant / 1-Step / Lite and a code.
