

# Break-even by account and recommended sale

Every Verodus size has a stated BE. Instant uses year-1 cost. 1-Step / Lite / Pro use first-payout + fee refund. Recommended sale is multi-factor — not the family median. 16 August 2026.

**Instant BE** =  $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}}) = \$875.25 \times (7.161\% / 22.07\%) = \text{\$284 at \$100k}$ , then  $\times \text{size}/100\text{k}$ . No refund. **Eval BE** =  $E[X] / (1 - P(\text{pay}))$ : 1-Step  $\$108.10 / 0.91192 = \text{\$119}$ ; Lite  $\$136.01 / 0.89384 = \text{\$152}$ ; Pro  $\$132.54 / 0.88002 = \text{\$151}$  at  $\$100\text{k}$ , then  $\times \text{size}/100\text{k}$ .  $F_m = BE / (1 - m)$ . List = sale  $\div 0.65$ . Instant  $\$200\text{k}$  pulled.

**Rec factors:** (1) Instant prints at the year-1 **20%** column — 40% and 60% were too rich versus BG / Goat / IF; (2)  $\$5\text{k}/\$10\text{k}$  Instant use a shop floor because year-1 20% is  $\$18 / \$36$ ; (3) sit under BG and Goat from  $\$10\text{k}$ , under Instant Funding and Hola everywhere; (4) never raise a live eval that is already the cheapest name and fat; (5) shop-round fees. Columns on this card are **10 / 20 / 30** (print / healthy / stretch), not 20 / 40 / 60.

Green = recommended sale. Each size shows **rec \$** and **BE \$**. Instant is cut to the year-1 20% print. Evals are unchanged. Instant  $\$100\text{k}$  rec  $\$359$  on year-1 BE  $\$284$  ( $10\% = \$316$ ,  $20\% = \$355$ ,  $30\% = \$406$ ). Eval Rec m of +33% to +59% is live VERO35 leftover — not a 40/60 target.

## 1b. Break-even fee (\$)

Same sizes as the rec card. Instant = year-1, no refund. Evals = first-payout + fee refund.

## 2. Break-even for every Verodus account

This is the number the rest of the card is built on. Instant also shows first-payout  $E[X]$  so the old  $\$875 / \$1,094$  path is visible and not used.

Green = Instant (year-1 BE). Blue = evals (first-payout BE). 1-Step \$5k BE is \$6; sale \$36 is leftover live, not a 60% target. Instant \$100k BE is \$284, not \$875. Columns are 10 / 20 / 30.

3. Why Instant first-payout margins were wrong

Same-difficulty Instant (D 84–94): Blue Guardian, Instant Funding, Goat, Hola, FP Zero, FXIFY Lite, Alpha. They charge **\$274–\$839** at \$100k. Our first-payout book put Verodus Instant E[X] at **\$875** and the 20% fee at **\$1,094** — above every peer — and painted those peers at –30% to –95%. A market that keeps selling Instant at Goat / BG / IF prices is not all insolvent. The industry report already said **year-1 (7.2% of buyers) prices Instant**, not first-payout eligibility (22%). First-payout 22% is “hit 5 valid days”; most of those accounts die in month 1 (PropScorer 41% of funded). Sustained Instant is 4–6% (Track360) — this book’s year-1 is 7.2%. **Instant E[*cost*] =  $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}})$** . Evals stay on first-payout + refund (those margins already matched the shelf).

Blue = live Verodus. Green = rec. On year-1, BG \$467 is +38%, Goat \$559 is +55%, IF \$639 is +57%, Hola \$839 is +60%, rec \$359 is +21%. First-payout column is the old (wrong) Instant basis. 40–60% year-1 takes are what Goat / IF / Hola already charge — too high for a new name.

4. Rec vs BE / 10% / 20% / 30% (Instant = year-1)

Instant: **BE =  $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}})$** , no refund. Evals: first-payout E[X] and refund  $\Rightarrow$  **BE =  $E[X] / (1 - P(\text{pay}))$** .  $F_m = BE / (1 - m)$ . Rec is the shopper price.

Green = rec is below BE (a hole). Blue = rec equals live and is above BE. Instant rec sits on the 20% year-1 print at \$25k+ (\$5k/\$10k are the shop floor). 1-Step / Lite / Pro stay on live VERO35 — those Rec m figures are leftover pricing power, not a 40/60 target. Green would mean below BE.

5. Instant — every instant street fee

40% / 60% were too high on year-1 cost. Instant \$100k 40% was \$473 and 60% was \$710 — above Blue Guardian \$467 and next to Goat \$559 / Instant Funding \$639. Rec now sits on the 20% year-1 print: \$59 / \$69 / \$99 / \$189 / \$359. \$5k/\$10k are a shop floor (year-1 20% is \$18 / \$36). \$25k+ is under BG (\$156 / \$243 / \$467) and Goat (\$199 / \$319 / \$559). \$100k \$359 is +21% on year-1 BE \$284 (10% = \$316, 20% = \$355, 30% = \$406). No \$200k Instant.

6. 1-Step — every 1-step street fee

Live is already the cheapest 1-step on the shelf at every size except \$5k (Fintokei \$35). \$335 vs FTMO \$579 / FN \$570 / Hola \$463 at \$100k. Keep live. Raising toward Hola would make the card less attractive, not more.

9. Rec vs BE / 10 / 20 / 30 (±%) and list

BE is the dollar fee, then (rec – BE) / BE. Other ±% columns are (rec – column) / column. Negative = rec is cheaper than that fee. List = rec ÷ 0.65 so VERO35 still lands on the card.
