

Break-even by account and recommended sale

Every Verodus size has a stated BE. Instant uses year-1 cost. 1-Step / Lite / Pro use first-payout + fee refund. Recommended sale is multi-factor — not the family median. 16 August 2026.

Instant BE = $E[X]_{\text{first}} \times (P_{\text{yr1}} / P_{\text{pay}}) = \$875.25 \times (7.161\% / 22.07\%) = \text{\$284 at \$100k}$, then $\times \text{size}/100\text{k}$. No refund. **Eval BE** = $E[X] / (1 - P(\text{pay}))$: 1-Step $\$108.10 / 0.91192 = \text{\$119}$; Lite $\$136.01 / 0.89384 = \text{\$152}$; Pro $\$132.54 / 0.88002 = \text{\$151}$ at \$100k, then $\times \text{size}/100\text{k}$. $F_m = BE / (1 - m)$. List = sale $\div 0.65$. Instant \$200k pulled.

Rec factors: (1) Instant prints at the year-1 **30%** column — greater margin that still sells; 20% was thin (+21%, \$25k under Alpha) and 40% / 60% were too rich versus BG / Goat / IF; (2) \$5k/\$10k Instant use a shop floor because year-1 30% is \$20 / \$41; (3) sit under BG and Goat from \$10k, under Instant Funding and Hola everywhere; (4) never raise a live eval that is already the cheapest name and fat; (5) shop-round fees. Columns on this card use **20 / 40 / 60** as the industry reference. Instant rec is the **30% print** — \$409 at \$100k is 0.88 $\times$ BG \$467. 40% (\$473) is Blue Guardian and 60% (\$710) sits above Goat / Instant Funding.

Green = recommended sale. Each size shows **rec \$** and **BE \$**. Instant is the year-1 30% print. Evals are unchanged. Instant \$100k rec \$409 on year-1 BE \$284 (20% = \$355, 30% = \$406, 40% = \$473, 60% = \$710). Eval Sale m of +33% to +59% is live VERO35 leftover — not a 60% target.

1b. Break-even fee (\$)

Same sizes as the rec card. Instant = year-1, no refund. Evals = first-payout + fee refund.

1c. Plan / Size / List / Sale / E[X] / P(pay) / BE / 20% / 40% / 60% / Sale m

Use 20 / 40 / 60 as the reference columns — that is the industry layout. Instant **target is 30%** (greater margin that still sells). 40% Instant \$100k is \$473 (Blue Guardian \$467). 60% is \$710 (above Goat \$559 / Instant Funding \$639). Do not aim Instant at 40 or 60. Sale is the recommended VERO35 fee. List = sale $\div 0.65$. Instant E[X] and BE are year-1; P(pay) is first-payout eligibility (22.1%). Eval E[X] / P(pay) / BE are first-payout + refund. Sale m = (sale – E[cost]) / sale.

Green = Instant (year-1 BE). Blue = evals (first-payout BE). 1-Step \$5k BE is \$6; sale \$36 is leftover live, not a 60% target. Instant \$100k BE is \$284, not \$875. Columns are 20 / 40 / 60. Instant rec is the 30% print.

3. Why Instant first-payout margins were wrong

Same-difficulty Instant (D 84–94): Blue Guardian, Instant Funding, Goat, Hola, FP Zero, FXIFY Lite, Alpha. They charge **\$274–\$839** at \$100k. Our first-payout book put Verodus Instant E[X] at **\$875** and the 20% fee at **\$1,094** — above every peer — and painted those peers at –30% to –95%. A market that keeps selling Instant at Goat / BG / IF prices is not all insolvent. The industry report already said **year-1 (7.2% of buyers) prices Instant**, not first-payout eligibility (22%). First-payout 22% is “hit 5 valid days”; most of those accounts die in month 1 (PropScorer 41% of funded). Sustained Instant is 4–6% (Track360) — this book’s year-1 is 7.2%. **Instant E[cost] = E[X]_{first} × (P_{yr1} / P_{pay})**. Evals stay on first-payout + refund (those margins already matched the shelf).

Blue = live Verodus. Green = rec. On year-1, BG \$467 is +38%, Goat \$559 is +55%, IF \$639 is +57%, Hola \$839 is +60%, rec \$409 is +31%. First-payout column is the old (wrong) Instant basis. 40–60% year-1 takes are what Goat / IF / Hola already charge — too high for a new name.

4. Rec vs BE / 20% / 40% / 60% (Instant = year-1)

Instant: **BE = E[X]_{first} × (P_{yr1} / P_{pay})**, no refund. Evals: first-payout E[X] and refund ⇒ **BE = E[X] / (1 – P(pay))**. F_m = BE / (1 – m). Rec is the shopper price.

Green = rec is below BE (a hole). Blue = rec equals live and is above BE. Instant rec sits on the 30% year-1 print at \$25k+ (\$5k/\$10k are the shop floor). 1-Step / Lite / Pro stay on live VERO35 — those Rec m figures are leftover pricing power, not a 40/60 target. Green would mean below BE.

5. Instant — every instant street fee

20% Instant \$100k (\$359) was the thin print — +21% and the industry floor at \$25k. 40% (\$473) is Blue Guardian; 60% (\$710) is above Goat / IF. Rec is the year-1 30% print: \$59 / \$69 / \$119 / \$219 / \$409. \$5k/\$10k stay the shop floor. \$25k \$119 sits on Alpha \$118, under BG \$156. \$100k \$409 is +31% on BE \$284, 0.88× BG \$467, under Goat \$559 / IF \$639. Live is already the cheapest 1-step on the shelf at every size except \$5k (Fintokei \$35). \$335 vs FTMO \$579 / FN \$570 / Hola \$463 at \$100k. Keep live. Raising toward Hola would make the card less attractive, not more.

9. Rec vs BE / 20 / 40 / 60 (±%) and list

BE is the dollar fee, then (rec – BE) / BE. Other ±% columns are (rec – column) / column. Negative = rec is cheaper than that fee. List = rec ÷ 0.65 so VERO35 still lands on the card.

10. Rec vs family low / median / average / high (context only)

% is (rec – stat) / stat. Negative = cheaper than that mark. Family = every Instant, every 1-step, or every 2-step — the page a customer opens. Sers Hyper Growth (\$260 / \$450) pulls 1-step \$5k / \$10k average up; ignore it.
